Soheil Seiqali, Klorman Construction (Concrete)

Steven Bumbalough, ITW Building Components Group (Wood)

Trevor Koller, EIT, Ikerd Consulting (Structural, Bridge)

INTRODUCTION

1 Overview

1.1 Description

The *Level of Development (LOD) Specification* is a reference that enables practitioners in the AEC Industry to specify and articulate with a high degree of clarity the content and reliability of Building Information Models (BIMs) at various stages in the design and construction process.

The Specification is a detailed interpretation of the LOD schema developed by the American Institute of Architects (AIA) for its *E202-2009 BIM and Digital Data Exhibit* and updated for its *G202-2013 Project BIM Protocol Form*¹, defining and illustrating² characteristics of model elements of different building systems at different Levels of Development, organized according to CSI Uniformat 2010³. Its intent is to help explain the LOD framework and standardize its use so that it becomes more useful as a communication tool.

The LOD Specification adheres to the intent of the LOD schema as developed by the AIA, and as such it is important to emphasize several points here.

1.1.1 LODs and Design Phase

The LODs are not defined by design phases. Rather, design phase completion, as well as any other milestone or deliverable, can be defined through the LOD language. There are several important reasons for this approach:

- 1) There is currently no detailed standard for the design phases. Many architects have created in-house standards, but these differ from one firm to the next, and even within a single firm the requirements are sometimes adjusted to the needs of a particular project.
- 2) Building systems progress from concept to precise definition at different rates, so at any given time different elements will be at different points along this progression. At completion of the Schematic Design phase, for example, the model will include many elements at LOD 200, but will also include many at LOD 100, as well as some at LOD 300, and possibly even LOD 400.

1.1.2 LODs and Model Definition

There is no such thing as an “LOD ### model.” As previously stated, project models at any stage of delivery will invariably contain elements and assemblies at various levels of development. As an example, it is not logical to require an “LOD 200 model” at the completion of the schematic design phase. Instead, the “100% SD Model” will contain modeled elements at various levels of development.

¹ AIA Contract Document *G202-2013, Building Information Modeling Protocol Form* is part of a series of digital practice documents the AIA published in June 2013. This series consists of *AIA E203™–2013, Building Information Modeling and Digital Data Exhibit*, *AIA G201™–2013, Project Digital Data Protocol Form*, and *AIA G202™–2013, Project Building Information Modeling Protocol Form*. For general information on the documents and downloadable samples see www.aia.org/digitaldocs. For executable versions of the documents see <http://www.aia.org/contractdocs>.

² All images are intended to illustrate building conditions in compliance with common building codes. However, the images do not take into account site specific conditions, regional building codes and other important information that may require a material change for specific projects. These illustrations do not make representation for fitness for a particular project nor for code or design compliance.

³ UniFormat™ Numbers and Titles used in this publication are from UniFormat™, published by CSI and Construction Specifications Canada (CSC), and are used with permission from CSI. For a more in-depth explanation of UniFormat™ and its use in the construction industry visit <http://www.csinet.org> or contact CSI, 110 South Union Street, Suite 100, Alexandria, VA 22314. (800) 689-2900.

1.2 Intent

1.2.1 Not a set of Requirements

The Specification is not a set of requirements as to what is modeled when or by whom. Rather it is a language by which users can define these requirements for their own firms or projects. This clear articulation allows model authors to define what their models can be relied on for, and allows downstream users to clearly understand the usability and the limitations of models they are receiving.

To accomplish the Specification's intent, its primary objectives are:

- 1) To help teams, including owners, to specify BIM deliverables and to get a clear picture of what will be included in a BIM deliverable
- 2) To help design managers explain to their teams the information and detail that needs to be provided at various points in the design process, and to track progress of their models
- 3) To allow downstream users to rely on specific information in models they receive from others.
- 4) To provide a standard that can be referenced by contracts and BIM execution plans.

1.2.2 Complements a BIM Execution Plan (BIMXP)

This Specification does not replace a project BIMXP, but rather is intended to be used in conjunction with such a plan, providing a means of defining models for specific information exchanges, milestones in a design work plan, and deliverables for specific functions.

1.3 Background

1.3.1 AIA Effort

In 2008, the AIA published its first set of Level of Development definitions in AIA Document *E202™-2008 Building Information Modeling Protocol*. Due to the rapidly evolving nature of the use of BIM, the AIA evaluated the *E202-2008*, including the LOD definitions. The result is the updated and reconfigured Digital Practice documents, *AIA E203™-2013, Building Information Modeling and Digital Data Exhibit*, *AIA G201™-2013, Project Digital Data Protocol Form*, and *AIA G202™-2013, Project Building Information Modeling Protocol Form*, which are accompanied by a detailed guide document entitled *Guide and Instructions to the AIA Digital Practice Documents*. The AIA's updated Digital Practice documents include revised LOD definitions.

1.3.2 BIMForum Effort

In 2011 the BIMForum initiated the development of this LOD Specification and formed a working group comprising contributors from both the design and construction sides of the major disciplines. To help further the standardization and consistent use of the LOD schema, and to increase its usefulness as a foundation for collaboration, the AIA licensed the BIMForum to utilize its latest LOD definitions in this Specification. The BIMForum working group first interpreted the AIA's basic LOD definitions for each building system, and then compiled examples to illustrate the interpretations. Because BIM is being put to an ever increasing number of uses, the group decided that it was beyond the initial scope to address all of them. Instead, the definitions were developed to address model element geometry, with three of the most common uses in mind – quantity take-off, 3D coordination and 3D control and planning. The group felt that in taking this approach the interpretations would be complete enough to support other uses.

1.3.3 LOD Definitions

The LOD definitions that are used in this Specification are identical to those published in the AIA's updated Digital Practice Documents, with two exceptions.

- 1) First, the working group identified the need for an LOD that would define model elements sufficiently developed to enable detailed coordination between disciplines – e.g. clash detection/avoidance, layout, etc. The requirements for this level are higher than those for 300, but not as high as those for 400, thus it was designated LOD 350. The AIA documents do not include LOD 350, but the associated *Guide and Instructions* references it.
- 2) Second, while LOD 500 is included in the AIA's LOD definitions, the working group did not feel it was necessary to further define and illustrate LOD 500 in this Specification because it relates to field verification. Accordingly the expanded descriptions and graphic illustrations in this Specification are limited to LOD 100-400.

2 Levels of Development

2.1 BIM as a Communication Tool

The LOD schema addresses several issues that arise when a BIM is used as a communication or collaboration tool, i.e., when someone other than the author extracts information from it:

- 1) During the design process, building systems and components progress from a vague conceptual idea to a precise description. In the past there has been no simple way to designate where a model element is along this path. The author knows, but others often don't.
- 2) It's easy to misinterpret the precision at which an element is modeled. Hand drawings range from pen strokes on a napkin to hard lines with dimensions called out, and the precision of the drawing can be inferred from its appearance. In a model though, a generic component placed approximately can look exactly the same as a specific component located precisely, so we need something besides appearance to tell the difference.
- 3) It is possible to infer or extract information from a BIM that the author doesn't intend – unconfirmed dimensions can be measured with precision, assembly information often exists before it's been finalized, etc. In the past, this issue has been sidestepped with all-encompassing disclaimers that basically say, "Since some of the information in the model is unreliable, you may not rely on any of it." The LOD framework allows model authors to clearly state the reliability of given model elements, so the concept becomes "Since some of the information in the model is unreliable, you may only rely on it for what I specifically say you can."
- 4) In a collaborative environment, where people other than the model author are depending on information from the model in order to move their own work forward, the design work plan takes on high importance – it is necessary for the model users to know when information will be available in order to plan their work. The LOD framework facilitates this.

The LOD Framework addresses these issues by providing an industry-developed standard to describe the state of development of various systems, assemblies, and components within a BIM. This standard enables consistency in communication and execution by facilitating the detailed definition of BIM milestones and deliverables.

2.2 Level of Development vs. Level of Detail

LOD is sometimes interpreted as Level of *Detail* rather than Level of *Development*. This Specification uses the concept of Level of *Development*. There are important differences.

Level of *Detail* is essentially how *much* detail is included in the model element. Level of *Development* is the *degree to which the element's geometry and attached information has been thought through* – the degree to which project team members may rely on the information when using the model.

In essence, Level of Detail can be thought of as input to the element, while Level of Development is reliable output.

2.3 Fundamental LOD Definitions ⁴

2.3.1 LOD 100

The Model Element may be graphically represented in the Model with a symbol or other generic representation, but does not satisfy the requirements for LOD 200. Information related to the Model Element (i.e. cost per square foot, tonnage of HVAC, etc.) can be derived from other Model Elements.

BIMForum Interpretation: LOD 100 elements are not geometric representations. Examples are information attached to other model elements or symbols showing the existence of a component but not its shape, size, or precise location. Any information derived from LOD 100 elements must be considered approximate.

2.3.2 LOD 200

The Model Element is graphically represented within the Model as a generic system, object, or assembly with approximate quantities, size, shape, location, and orientation. Non-graphic information may also be attached to the Model Element.

BIMForum interpretation: At this LOD elements are generic placeholders. They may be recognizable as the components they represent, or they may be volumes for space reservation. Any information derived from LOD 200 elements must be considered approximate.

⁴ The definitions for LOD 100, 200, 300, 400, and 500 included in this Specification represent the updated language that appears in the AIA's most recent BIM protocol document, *G202–2013, Building Information Modeling Protocol Form*. The LOD 100, 200, 300, 400 and 500 definitions are produced by the AIA and have been used by permission. Copyright © 2013. The American Institute of Architects. All rights reserved. LOD 350 was developed by the BIMForum working group. Copyright © 2013. The BIMForum and the American Institute of Architects. All rights reserved.

2.3.3 LOD 300

The Model Element is graphically represented within the Model as a specific system, object or assembly in terms of quantity, size, shape, location, and orientation. Non-graphic information may also be attached to the Model Element.

BIMForum interpretation: The quantity, size, shape, location, and orientation of the element as designed can be measured directly from the model without referring to non-modeled information such as notes or dimension call-outs.

2.3.4 LOD 350

The Model Element is graphically represented within the Model as a specific system, object, or assembly in terms of quantity, size, shape, location, orientation, and interfaces with other building systems. Non-graphic information may also be attached to the Model Element.

BIMForum interpretation: Parts necessary for coordination of the element with nearby or attached elements are modeled. These parts will include such items as supports and connections. The quantity, size, shape, location, and orientation of the element as designed can be measured directly from the model without referring to non-modeled information such as notes or dimension call-outs.

2.3.5 LOD 400

The Model Element is graphically represented within the Model as a specific system, object or assembly in terms of size, shape, location, quantity, and orientation with detailing, fabrication, assembly, and installation information. Non-graphic information may also be attached to the Model Element.

BIMForum interpretation: An LOD 400 element is modeled at sufficient detail and accuracy for fabrication of the represented component. The quantity, size, shape, location, and orientation of the element as designed can be measured directly from the model without referring to non-modeled information such as notes or dimension call-outs.

2.3.6 LOD 500

The Model Element is a field verified representation in terms of size, shape, location, quantity, and orientation. Non-graphic information may also be attached to the Model Elements.

This Specification does not address LOD 500.

2.4 Example – Light Fixture:

- 100 cost/sf attached to floor slabs
- 200 light fixture, generic/approximate size/shape/location
- 300 Design specified 2x4 troffer, specific size/shape/location
- 350 Actual model, Lightolier DPA2G12LS232, specific size/shape/location
- 400 As 350, plus special mounting details, as in a decorative soffit

3 Using the Specification

3.1 Glossary

The expanded definitions in this Specification use the following interpretations of these terms:

3.1.1 Specific:

The quantity, size, shape, location, and orientation of the element as designed can be measured directly from the model without referring to non-modeled information such as notes or dimension call-outs.

3.1.2 Actual:

The model element includes all the qualities of a specific element and is representative of the manufacturer's model to be installed or the construction intent of an assembly.

3.2 Details

3.2.1 Order of Precedence

The body of this Specification expands on the Fundamental Definitions as they apply to specific building systems and sub-systems. In the event of any conflict, more specific expansions take precedence over less specific expansions and Fundamental Definitions, e.g.

the expanded definitions for C1010 take precedence over those for C10, which in turn take precedence over the Fundamental Definitions.

3.2.2 LOD Definitions as Minimum Requirements

The LODs provide five snapshots of the progression of an element from conceptual to specified – there are many steps in this progression between the defined LODs. The LOD definitions, then, should be considered minimum requirements – i.e. an element has progressed to a given LOD only when all the requirements stated in the definition have been met.

3.2.3 LOD Definitions are Cumulative

For a given element each LOD definition includes the requirements of all previous LODs. Thus for an element to qualify for LOD 300 it must meet all the requirements for 200 and 100 as well as those stated in the LOD 300 definition.

3.2.4 Model Element Author

This document does not prescribe who the author of a particular component at a given LOD should be – the sequence of responsibility for modeling various systems will vary from one project to another. To accommodate this variation this document defers to the concept of Model Element Author (MEA) as defined in the *AIA E203-2013*: “The Model Element Author is the entity (or individual) responsible for managing and coordinating the development of a specific Model Element to the LOD required for an identified Project milestone, regardless of who is responsible for providing the content in the Model Element.”⁵

3.2.5 2D Supplementary Drawings

In current practice models are often supplemented with 2D information such as detail drawings. This Specification does not address this supplementation, but rather deals only with what is actually modeled in 3D and non-graphic information associated with the modeled elements.

3.3 Project-Specific Information

As mentioned in the Overview above, this Specification is intended to be used in conjunction with a project BIMXP. Many information needs will vary from project to project, even for identical elements. This kind of information is therefore not included in the LOD definitions specified here, but rather is left to be addressed in individual BIMXPs. The following are some notable examples.

3.3.1 Size Thresholds

In most projects a determination is made to model certain elements only if they are over a specified size – e.g. conduit less than 1/2” (10 mm) diameter is not modeled. These size thresholds do not consistently correspond to certain LODs, and they vary from project to project. Thus they are not specified in the LOD definitions but rather in the project’s BIMXP, for example through the “Notes” cells in the Model Element Table of the *AIA G202-2013*.

3.3.2 Clearances

Clearances such as door swings, maintenance access zones, and accessibility requirements can be critical design issues and in many cases are geometrically modeled to reserve the space. The implementation of this type of spatial coordination can be accomplished in various ways; therefore it is neither practical nor useful for this Specification to dictate particular requirements, for example, *all door swings to be modeled as quarter-cylinder solids*. Implementation of required clearances is to be established within individual BIMXPs.

3.4 Using the Specification with a BIMXP

Most BIMXPs include a section that details information exchanges – models to be produced to exchange specific information at specific points in a specific BIM use. In most cases, though, current practice is to accompany these models with the common “for reference only” disclaimer, diluting the effectiveness of the exchange. Referencing this Specification in the BIMXP and using it to concisely define the information exchange models brings many efficiencies to the process – among them:

3.4.1 Reliance

As noted above (see “BIM as a Communication Tool”), a major problem with allowing others to rely on a BIM is that it can contain information the author doesn’t intend. By defining a model through the LOD Specification the author can limit reliance to only what he/she specifically states.

3.4.2 Multiple uses

Much model information is common across several information exchanges. This Specification facilitates the definition of models that will support multiple exchanges.

⁵ AIA Document *E203-2013 Building Information Modeling and Digital Data Exhibit*, Article 1.4.6. Copyright © American Institute of Architects 2013. All rights reserved. Definition quoted here by permission.

3.4.3 Efficient sequencing

The development of models as the design and construction process progresses follows logical sequences – much information depending on the prior development of other information. The definition of milestones, information exchanges, and other deliverables through this Specification facilitates the orderly sequencing of models to align with efficient development of information.

3.4.4 Avoidance of over-modeling

The LOD Specification facilitates the application of a pull-planning process to the modeling effort, limiting the development of model elements and information to that which the team identifies as useful.

Note that the definition and sequencing of models usually cannot be set in stone when the BIMXP is first developed. In most cases the modeling plan must evolve as the project progresses.

4 Organization of the Specification

4.1 Geometric and Attribute Information

To facilitate use of this Specification Attachment 1, Model Development Specification (MDS) has been provided. This attachment is a set of spreadsheets that can be used to collect and correlate LOD Information for a specific project.

A model element can contain two types of information: a) the element's geometry and b) associated numeric and/or textual attributes. To address these types of information this Specification contains two parts:

4.1.1 Part A: Element Geometry

Part A consists of narrative descriptions and illustrations of specific model elements at each LOD. Part A forms the bulk of this document.

4.1.2 Part B: Associated Attribute Information

Part B is contained in Attachment 1, a workbook that begins with the Model Element Table which mirrors the layout of the Model Element Table in the AIA *G202-2013 Building Information Modeling Protocol Form*, and can be referenced by that document. The Model Element Table references Attribute Tables that contain attribute information for various building systems.

Figure 1

4.2.1 Building Systems

The rows of the Model Element Table (Figure 1) are building elements listed in accordance with CSI Uniformat 2010. The table also lists Relevant Attribute Tables for each system, referring to the tabs containing attribute information for the associated system(s). If desired users can add Attribute Tables for specific line items.

4.2.2 Milestones/Deliverables

The table includes columns for defining the LODs for various milestones within a project. Each milestone column has three sub-columns: Level of Development (LOD), Model Element Author (MEA), and Notes. The table in Attachment 1 shows standard milestones for the completion of the traditional design phases as well as examples of Project-Specific Milestones for interim reviews, specific deliverables, BIM-Use information exchanges, etc. Users are encouraged to modify and add to these milestones as necessary. Once the milestones for a project have been determined, they can be re-ordered into a logical sequence as in Figure 2.

4.3.1 Attribute Table Anatomy

Attribute Tables consist of three parts.

- 1) Part 1, Attribute Description, lists Attributes relevant to the associated building system(s).
- 2) Part 2, LOD Profile, correlates Attribute requirements with LODs from the Model Element Table. Attributes with pre-populated LOD Profiles show a correlation between Attributes and LODs that represents current practices of proficient BIM users.
- 3) Part 3, Milestones, is used to mark the attributes required for specific milestones and deliverables. The tables in Attachment 1 include example milestones, but users will customize the tables by copying the milestones they created for the Model Element Table.

4.3.2 MEP Attribute Tables

The MEP attribute tables use a somewhat different format than other sections, since components from multiple systems might be used to make up a specific element. Case in point, an air handler is primarily a D30 HVAC element, but can include plumbing, fire protection and electrical elements as well.

D20 - Plumbing

XXXXXXXX				X	X

Figure 4

The MEP Systems tabs are grouped into two types:

- 1) Type 1 – source or end elements and controllers: D20 Plumbing, D30 HVAC, D40 Fire Protection and D50 Electrical.
- 2) Type 2 – distribution elements such as ducts, pipes, and cables: D Air Distribution, D Fluid Gas Distribution and D Electrical Distribution relate to distribution elements such as ducts, pipes, and cables.

MEP attribute tables are broken down into two main sections

- 3) Common Attributes: Attributes that are common to all elements within the table
- 4) Specific Attributes: Attributes that are specific to an individual type of element within the table. In many tables the Individual elements are organized into a hierarchy of classes and sub-classes. In these cases the attributes needed for a specific element include those listed for the element itself plus those listed in any of the classes above it in the hierarchy. E.g. as Figure 4 shows, the basic attributes for a water meter include all those shown in bold.

Note: The Type 1 attributes use both the Common and Specific attributes section, while the Type 2 attributes use only the Specific attribute section.

4.3.3 Using the Attribute Tables

There are many ways to use the Attribute Tables – three are shown here.

- 1) Project teams adopt the pre-populated attribute lists – using only those attributes with entries in the LOD Profile sections and leaving those entries unchanged. The pre-populated correlation between Attributes and LODs represents current practices of proficient BIM users in the AEC industry.
- 2) Project teams create a custom correlation between LODs and Attribute population requirements. In this case the project team would edit the LOD Profile section to reflect the specific requirements of the project.
- 3) Project teams create new, project specific milestones and define Attribute population requirements in the Milestones sections. This approach will give project teams the greatest flexibility for defining Attribute population requirements.

5 Updates of This Document

While this document is intended as a reference that can be cited in agreements such as contracts and BIM execution plans, it is recognized that the use of BIM in design and construction is evolving. To accommodate this evolution this document will be updated periodically in clearly identifiable versions. A project can adopt a specific version and then has the option to remain with that version or update if a new version is published. Initially the target update frequency is annually, but that may change in the future. In addition, interim updates may be issued if needed.

5.1 Revision History

10/30/15	Level of Development Specification 2015	New changes are noted with a bold bar. Definitions have not been changed except for minor grammatical corrections and formatting. New content released as an Appendix to Part A for engineered metal building structures, precast concrete, highway bridge content and rail road bridge content.
4/30/15	Level of Development Specification 2015 DRAFT FOR PUBLIC COMMENT	New changes are noted with a bold bar. Definitions have not been changed except for minor grammatical corrections and formatting. Part B, Model Element Table, and Attribute Tables were added.

12/30/14	Level of Development Specification 2014	New changes are noted with a bold bar. Definitions have not been changed except for minor grammatical corrections and formatting. Images and image notes have been added in <i>blue italics font</i> .
8/22/13	Level of Development Specification 2013	
4/24/13	Initial draft for public review	

5.2 Revision Process

5.2.1 Public Comment

Each new version is first released as a draft for public comment. Feedback is evaluated and resolved prior to the publishing of the official version.

5.2.2 Appendix

An increasing number of professional organizations are adopting this Specification and providing additional content relating to their domains. To accommodate information that becomes available after the public-comment release but prior to the final release, content is developed in collaboration with industry organizations and leading expert practitioners, and then vetted by the LOD working group. This content is released as an Appendix to Part A and as additional identified Attribute Table tabs in Part B. The new content is then integrated into the next public comment draft.

A: SUBSTRUCTURE

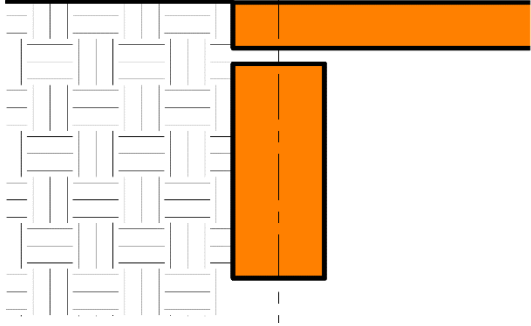

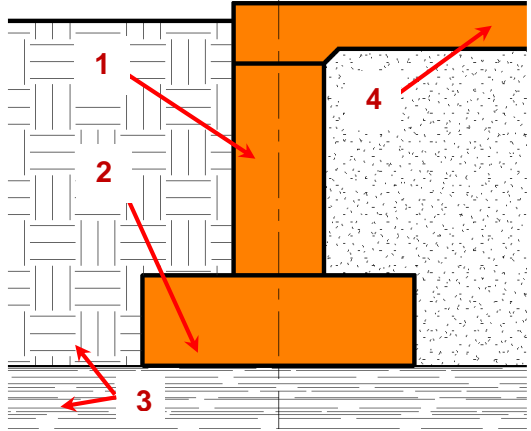

A10 Foundations

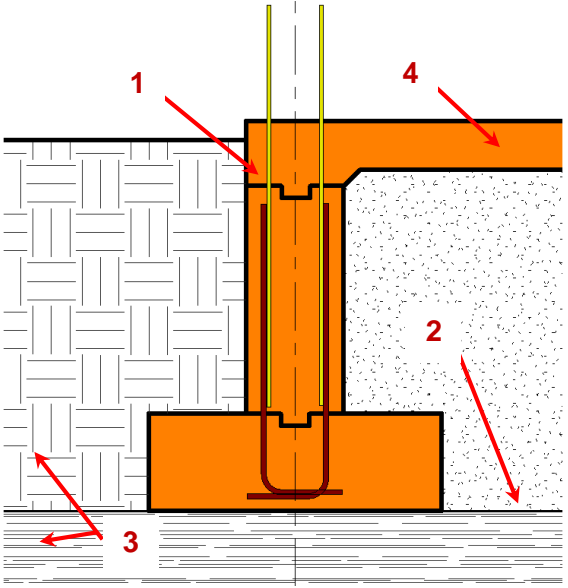

100	Assumptions for foundations are included in other modeled elements such as an architectural floor element or volumetric mass that contains layer for assumed structural framing depth. Or, schematic elements that are not distinguishable by type or material. Assembly depth/thickness and locations still flexible.	
200	Element modeling to include: <ul style="list-style-type: none"> • Approximate size and shape of foundation element • Structural building grids for local project coordinate system are defined in model and coordinated with global civil coordinate system (State Plane Coordinate System, etc).

B1020 – Roof Construction

[See [B1010](#)]

B1020.10 – Roof Structural Frame

Description: Structural elements required for support of floor construction within basements and above grade. Includes columns, girders, beams, trusses, joists. Includes cast-in-place concrete, precast concrete, unit masonry, metal framed, and wood framed systems. Includes framed and sleeved openings for services. Includes Floor Construction Supplementary Components as appropriate.

[See [B1010.10](#)]

B1020.20 – Roof Decks, Slabs, and Sheathing

Includes: Structural roof deck, slab, and sheathing construction. Includes cast-in-place concrete, precast concrete, cementitious decks and toppings, metal decking, wood sheathing, wood decking, timber decking and expansion control. Includes framed and sleeved penetrations for services and housekeeping pads for equipment. Includes Roof Construction Supplementary Components as appropriate.

[See [B1010.20](#)]

B1020.30 – Canopy Construction

Includes: Structural frame and decks, slabs, and sheathing for canopy construction.

These components are typically modeled as part of other assemblies listed in the tables above. Do not assign this Unifomat classification unless a supplementary component is modeled independently of another assembly.

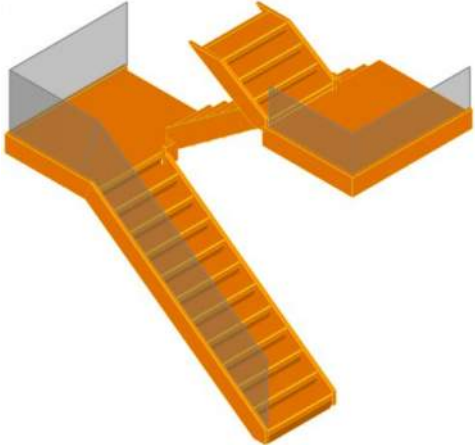

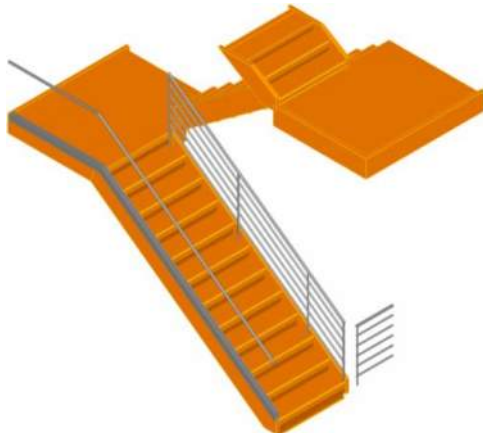

[See [B1010.20](#)]

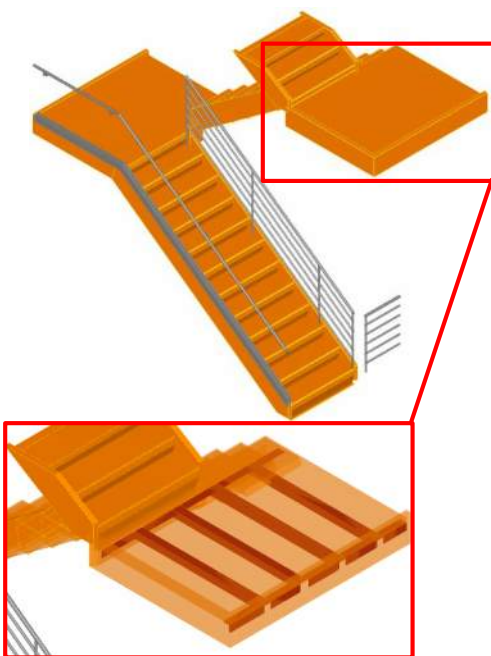

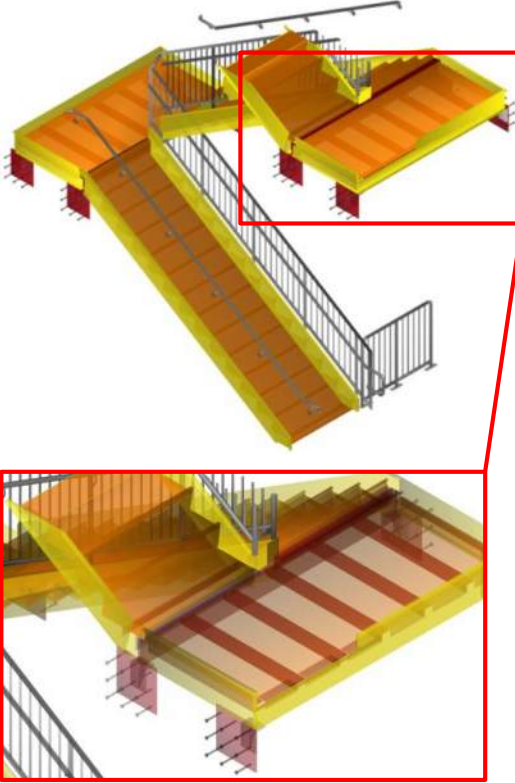

B1080 – Stairs

100	Assumptions for all stair systems (including railings, fire escapes, walkways, and ladders) are included in other modeled elements such as a spatial or massing element; or, schematic model element that indicates the approximate overall dimensions of the stair layout.	
-----	---	--

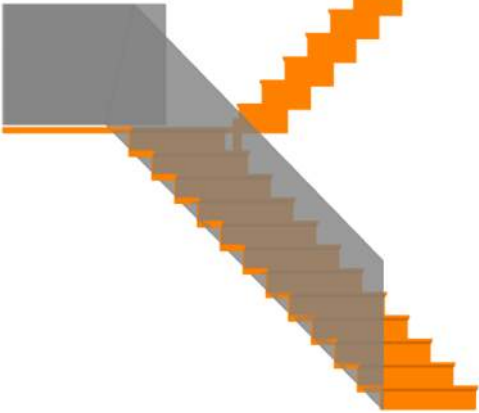

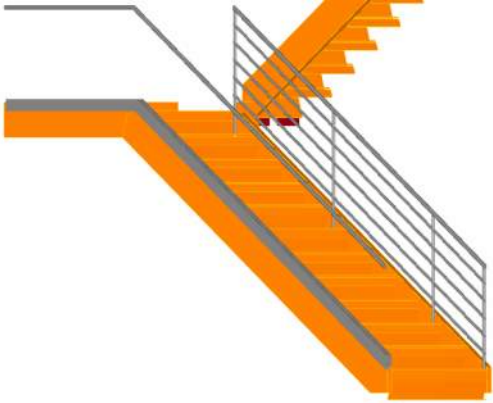

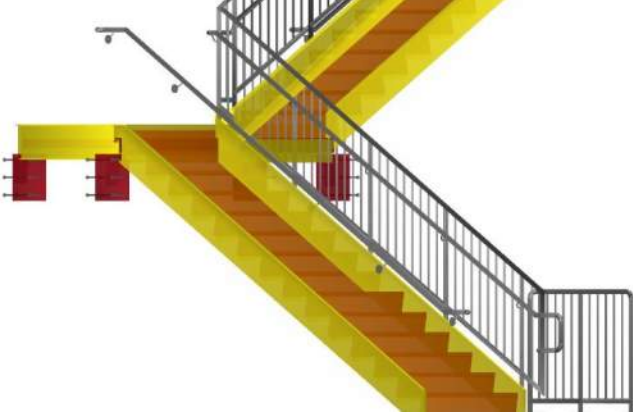

B1080.10 – Stair Construction

Includes: Structural framing for exterior and interior stairs including treads, risers, and landings. Includes fire escapes and ladders.

100	See B1080	
200	<p>Generic model element with simplified treads and risers.</p> <p>Nominal overall unit scope shall include:</p> <ul style="list-style-type: none"> • Nominal plan dimensions (length, width) • Nominal vertical dimensions (levels, landings) 	 <p>42 B1080.10-LOD-200 Stair Construction</p>
300	<p>Major stair support elements are modeled (stringers).</p> <p>Treads and risers are modeled to indicate design-specified nosing conditions.</p>	 <p>43 B1080.10-LOD-300 Stair Construction</p>

<p>350</p>	<p>Secondary stair support elements are modeled (hangers, brackets, etc.). Required clearance/code zones are modeled.</p>	 <p>44 B1080.10-LOD-350 Stair Construction</p>
<p>400</p>	<p>All stair elements are modeled to support fabrication and installation.</p>	 <p>45 B1080.10-LOD-400 Stair Construction</p>

B1080.50 – Stair Railings

100	See B1080	
200	Generic model elements without articulation of material or railing structure such as balusters, posts, or supports.	 <p>46 B1080.50-LOD-200 Stair Railings</p>
300	<p>Modeled assemblies by type to include:</p> <ul style="list-style-type: none"> • Railings • Balusters • Posts • Supports for wall mounted railings <p>Required non-graphic information associated with model element includes:</p> <ul style="list-style-type: none"> • Material 	 <p>47 B1080.50-LOD-300 Stair Railings</p>
400	[See Fundamental LOD Definitions]	 <p>48 B1080.50-LOD-400 Stair Railings</p>

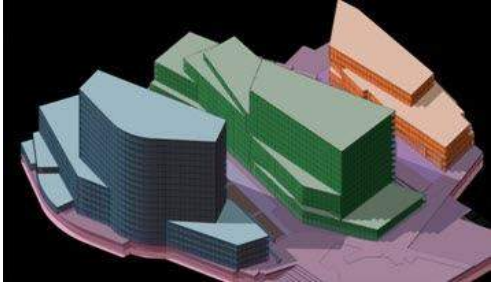

B1080.60 – Fire Escapes

[See [B1080.10](#) and [B1080.50](#)]

B1080.70 – Metal Walkways
[See [B1080.10](#) and [B1080.50](#)]

This includes but is not limited to fasteners, anchor rods, and other related hardware.2) Cladding and sheathing are not shown for clarity in this image.	 <p>63 B2010.06-LOD-400 Exterior Wall (Wood)</p>

B2010.10 – Exterior Wall Veneer

Description: Nonstructural outside face elements of exterior walls. Includes precast concrete, unit masonry, EIFS, manufactured siding, and stucco.

100	See B20	 <p>64 B2010.10-LOD-100 Exterior Wall Veneer</p>
200	See B2010	 <p>65 B2010.10-LOD-200 Exterior Wall Veneer</p>
300	See B2010	 <p>66 B2010.10-LOD-300 Exterior Wall Veneer</p>
350	<p>Exterior wall veneer modeled as a separate element. All openings modeled to rough dimensions. Precast concrete panels are individually modeled. Connection points are specified.</p> <p><i>Images notes:</i></p> <ol style="list-style-type: none"> 1) Wall veneer element 2) Skin layers 3) Core framing 4) Concrete slab edge 	 <p>67 B2010.10-LOD-350 Exterior Wall Veneer</p>

400

Element modeling includes:

Image notes:

- 1) *Individual masonry units*
- 2) *Skin layers including*
- 3) *Moisture barrier, sheathing, and insulation*
- 4) *Core framing*
- 5) *Bolt*
- 6) *Concrete slab edge*
- 7) *Weep holes*

68 B2010.10-LOD-400 Exterior Wall Veneer

B2010.20 – Exterior Wall Construction

Description: Exterior wall construction including backup systems for wall veneer. May be vertical load bearing. Includes cast-in-place concrete walls, precast concrete walls, unit masonry walls, metal framed wall systems, and wood framed wall systems.

100	See B20	
200	See B2010	
300	See B2010	
350	Exterior wall construction modeled as a separate element. All openings modeled to rough dimensions. Headers and jamb framing are modeled.	 <p>69 B2010.20-LOD-350 Exterior Wall Construction</p>
400	Element modeling to include: <ul style="list-style-type: none"> • Studs and tracks • Individual masonry units • Reinforcing • Sheathing • Insulation 	

B2010.30 – Exterior Wall Interior Skin

Description: Materials to provide finish or protective covering on inside of face of exterior walls. May include insulation and vapor retarder.

100	See B20	
200	See B2010	
300	See B2010	
350	Exterior wall interior skin modeled as a separate element. All openings modeled to rough dimensions.	 <p>70 B2010.30-LOD-350 Exterior Wall Interior Skin</p>
400	Element modeling to include: <ul style="list-style-type: none"> • Studs and tracks • Individual masonry units • Reinforcing • Wall board • Insulation 	

B2010.50 – Parapets

Exterior wall construction above plane of roof.

[See [B2010](#), [B2010.10](#), [B2010.20](#), and [B2010.30](#)]

B2010.60 – Equipment Screens

Exterior wall construction to screen equipment from public view.

[See [B2010](#), [B2010.10](#), [B2010.20](#), and [B2010.30](#)]

B2020 – Exterior Windows

100	See B20	
200	Windows approximate in terms of location, size, count and type. Units are modeled as a simple, monolithic component; or represented with simple frame and glazing. Nominal unit size is provided.	

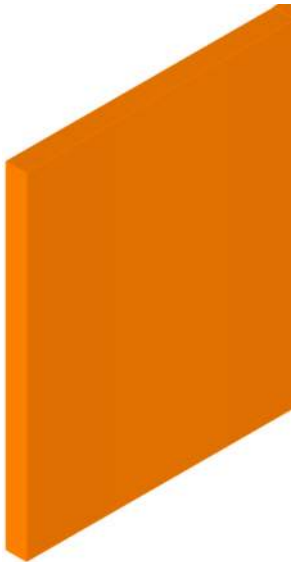

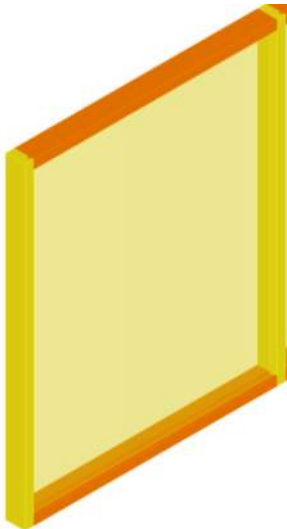

B2020.10 – Exterior Operating Windows

100	See B20	
200	See B2020	
300	Units are modeled based on specified location and nominal size. Outer geometry of window frame elements and glazing modeled. Operation is indicated. Required non-graphic information associated with model elements includes: <ul style="list-style-type: none"> • Aesthetic characteristics (finishes, glass types) • Performance characteristics (i.e. U-value, wind loading, blast resistance, structural, air, thermal, water, sound) • Functionality of the window (fixed, casement, double/single hung, awning/project out, pivot, sliding) 	
350	Rough opening dimensions Attachment method of window to structure Embed geometry	
400	Frame profiles Glazing sub-components (gaskets) Attachment components	

B2020.20 – Exterior Fixed Windows

[See [B2020.10](#)]

B2020.30 – Exterior Window Wall

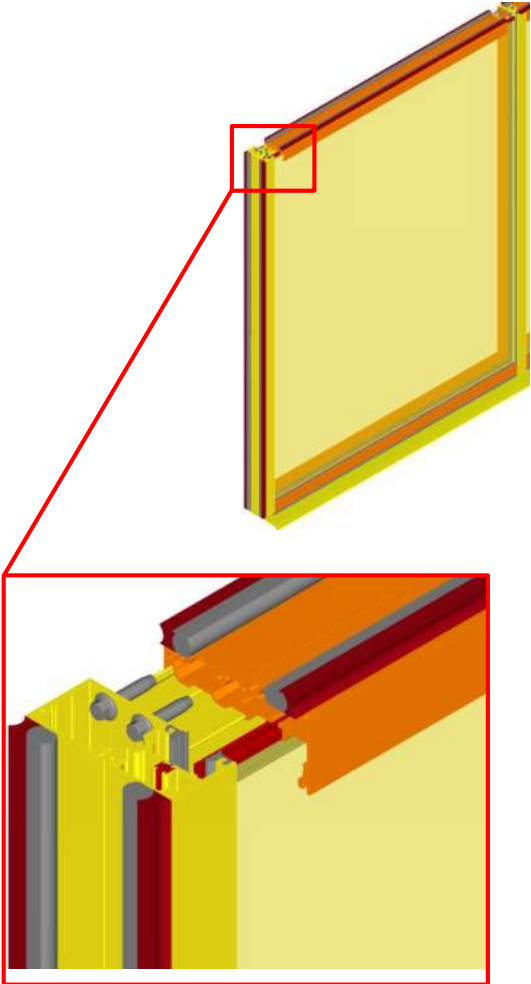

100	See B20	
200	<p>Generic wall objects representing major types of proposed window wall assemblies.</p> <p>Overall window wall assembly depth represented by a single model object.</p> <p>Layouts and locations still flexible.</p>	 <p data-bbox="764 913 1240 940"><i>71 B2020.30-LOD-200 Exterior Window Wall</i></p>
300	<p>Specified location and orientation of face of glass.</p> <p>Nominal face dimensions and thickness of glazing.</p> <p>Structural support systems of wall to be modeled.</p> <p>Spacing, location, size and orientation of mullions.</p> <p>Operable components defined (windows, louvers and doors) and included in model.</p>	 <p data-bbox="764 1528 1240 1556"><i>72 B2020.30-LOD-300 Exterior Window Wall</i></p>

350

Mullion shapes and geometry defined.
Actual anchorage layouts and types defined.
Actual panel dimensions (including seating).

73 B2020.30-LOD-350 Exterior Window Wall

<p>400</p>	<p>Complete mullion extrusion profiles. Interface details between wall systems (within) and wall and support systems including sealants, end dams, flashings and membranes.</p>	 <p>74 B2020.30-LOD-400 Exterior Window Wall</p>
------------	---	---

B2020.50 – Exterior Special Function Windows

[See [B2020.10](#)]

B2050 – Exterior Doors and Grilles

<p>100</p>	<p>Simple representation of a door unit. Size, count, and location are approximate.</p>	
<p>200</p>	<p>Units are modeled as a simple, monolithic component; or represented with simple frame and panel. Nominal unit size is provided.</p>	

B2050.10 – Exterior Entrance Doors

Exterior personnel door assemblies at main entrances. Includes automatic, revolving, balanced, and other special operating entrance doors, and sliding storefront wall systems.

100	See B20	
200	See B2050	
300	<p>Entrance door assemblies modeled by type to include the following:</p> <p>Specific door panels and frames (if applicable).</p> <p>Hardware set functionality and types are specified in non-graphic information.</p> <p>Operation is specified .Spatial requirements for operation are modeled.</p>	
350	<p>Rough opening is modeled (if applicable).</p> <p>Major framing elements are modeled at jambs and head.</p> <p>Operation or mechanism enclosures are modeled.</p>	
400	<p>Actual frame/mullion extrusions.</p> <p>Actual panel size dimensions.</p> <p>All connections and interfaces modeled including brackets, supports, sealants, and thresholds.</p>	

B2050.20 – Exterior Utility Doors

Exterior personnel door assemblies other than at main entrances.

100	See B20	
200	See B2050	
300	<p>Entrance door assemblies modeled by type to include the following:</p> <p>Specific door panels and frames (if applicable).</p> <p>Hardware set functionality and types are specified in non-graphic information.</p> <p>Operation is specified graphicly and with non-graphic information.</p> <p>Spatial requirements for operation are provided.</p>	
350	<p>Rough opening is modeled</p> <p>Major framing elements are modeled at jambs and head</p>	
400	All connections and interfaces modeled including brackets, supports, sealants, and thresholds.	

B2050.30 – Exterior Oversize Doors

Large exterior door assemblies to allow for passage of large objects involving various operating methods.

100	See B20	
200	See B2050	
300	Oversize door assemblies modeled by type to include the following: Door panels with nominal dimensions. Frames with nominal dimensions. Hardware set functionality and types included in non-graphic information. Clearance zones are modeled for operation of overhead doors. Enclosures and motor housings are modeled with overall nominal dimensions.	
350	Rough opening is modeled (if applicable). Major framing elements in wall are modeled at jambs and head. Other major structural support elements are modeled such as support posts and beams.	
400	All connections and interfaces modeled including brackets, supports, sealants, and thresholds.	

B2050.40 – Exterior Special Function Doors

[See [B2050.20](#) or [B2050.30](#)]

B2050.60 – Exterior Grilles

Exterior devices of open construction to provide moveable barrier to provide access through wall or other divider.

100	See B20	
200	See B2050	
300	Grille assemblies modeled by type to include the following: Nominal size of unit. Required openness provided as non-graphic information. Operation is specified.	
350	Rough opening is modeled (if applicable). Major framing elements are modeled at jambs and head.	
400	All connections and interfaces modeled including brackets, supports, sealants, and thresholds.	

B2050.70 – Exterior Gates

Exterior devices of solid or open construction to provide moveable barrier to provide access through wall or other divider.

[See [B2050.60](#)]

B2050.90 – Exterior Door Supplementary Components

Includes frames, hardware, glazing and louvers that are part of door to be included with exterior door elements above as appropriate.

These components are typically modeled as part of other assemblies listed in the tables above. Do not assign this Unifomat classification unless a supplementary component is modeled independently of another assembly.

B2070 - Exterior Louvers and Vents

100	See B20	
200	Generic model element that is indicative of approximate area and location of intended louver/vent.	

B2070.10 – Exterior Louvers

100	See B20	
200	See B2070	
300	Louver assembly modeled by type, indicative of area and location of intended louver/vent. Includes accurate frame (boundary dimensions) and blades. Opening for louver is cut from host wall Performance level defined in non-graphic information associated with model elements (e.g. storm proof or not, free air)	
350	Rough opening is modeled (if applicable) Major framing elements are modeled at connection points. Connection points are modeled.	
400	All connections and interfaces modeled including brackets, supports, and sealants.	

B2070.50 – Exterior Vents

[See [B2070.10](#)]

B2080 - Exterior Wall Appurtenances

[See [B2050](#)]

B2080.10 – Exterior Fixed Grilles and Screens

Exterior enclosures, grilles and screens of wood, metal, plastic, and other materials for a variety of purposes including screening of equipment.

[See [B2050.60](#)]

B2080.30 – Exterior Opening Protection Devices

Manufactured items such as louvers, fins, shutters, demountable panels, awnings, and sun screens to provide sun control, privacy, security, insulation, and storm protection on exterior of windows, skylights, and entrances. Includes fixed and moveable, manually and electrically operated, and automatically controlled devices.

[See [B2010.60](#)]

B2080.50 – Exterior Balcony Walls and Railings

[See [B2010.50](#)]

B2080.70 – Exterior Fabrications

Fabrications of a variety of materials formed to various profiles for a variety of purposes including column covers, decorative metal, ornamental woodwork, and plaster fabrications.

[See [Fundamental LOD Definitions](#)]

B2080.80 – Bird Control Devices

[See [Fundamental LOD Definitions](#)]

B2090 – Exterior Wall Specialties

Complete fabrication of metal, wood, and fiberglass, including accessories and appurtenances. For example, clocks, below-grade egress assemblies, and window wells.

[See [Fundamental LOD Definitions](#)]

B30 Exterior Horizontal Enclosures

100	Solid mass model representing overall building volume; or, schematic wall elements that are not distinguishable by type or material. Assembly depth/thickness and locations still flexible.	
-----	--	--

B3010 – Roofing

100	See B30	
200	Generic assembly that contains spatial (layer) allowance for structural slab/deck and/or framing system.	
300	Individual substrate layers are not separately modeled, but they are specified within a composite assembly. Roof structure is modeled separately.	

B3010.10 – Steep Slope Roofing

Lapped roofing shingles, shakes and roofing tiles, including fastening and flashing products and methods.

[See [B1020](#)]

Steep slope roofing material is often modeled as a layer within the overall roof structure assembly.

B3010.50 – Low Slope Roofing

Includes membrane roofing of various types and protected membrane roofing, including fastening and flashing products.

100	See B30	
200	See B3010	
300	Specific material thickness, openings are subtracted from solid. Framing is a separate assembly, see B10 . Drainage pitches are modeled.	

B3010.70 – Canopy Roofing

[See [B3010.10](#) or [B3010.50](#)]

B3010.90 – Roofing Supplementary Components

Includes substrate boards, vapor retarder, air barriers, deck insulation, flashing and sheet metal, and expansion joints to be included with roofing elements above as appropriate.

These components are typically modeled as part of other assemblies listed in the tables above. Do not assign this Unifomat classification unless a supplementary component is modeled independently of another assembly.

B3020 – Roof Appurtenances

Roof specialties and accessories installed on or in roofing or traffic bearing horizontal enclosure systems. Includes components for the management of rainwater, but excludes mechanical and structural items.

100	See B30	
200	See Fundamental LOD Definitions	

B3020.10 – Roof Accessories

Includes ladders, curbs, vents, walkways, and snow guards.

100	See B30	
200	See Fundamental LOD Definitions	
300	<p><u>Ladders</u>: Specific assemblies indicating length and width.</p> <p><u>Walkways</u>: Specific assemblies indicating length, width, and rail/guard height.</p> <p><u>Vents</u>: Specific assemblies indicating roof opening size. Roof opening element is included.</p>	
350	<p><u>Ladders</u>: Specific assemblies indicating length, width, and attachment/anchoring members. Required access/clearance space is modeled.</p> <p><u>Walkways</u>: Specific assemblies indicating length, width, rail/guard height, and support/attachment/anchoring members. Required access/clearance space is modeled.</p> <p><u>Vents</u>: Specific assemblies indicating roof opening size and attachment/anchoring members if applicable. Required service access space is modeled.</p>	

B3020.30 – Roof Specialties

Includes cupolas, spires, steeples, and weathervanes.

[See [Fundamental LOD Definitions](#)]

B3020.70 – Rainwater Management

Includes conductor heads, gutters, downspouts, scuppers, and splash blocks.

[See [D2030.10](#) and [D2030.20](#)]

B3040 – Traffic Bearing Horizontal Enclosures

100	See B30	
200	Modeled as part of other composite assembly. See B3010 .	

B3040.10 –Traffic Bearing Coatings

Includes surface applied waterproofing exposed to weather and suitable for pedestrian or vehicular traffic.

[Not Modeled]

B3040.30 – Horizontal Waterproofing Membrane

Includes substrate board, deck insulation, vapor retarder, sheet metal flashing and trim, flexible flashing, and expansion joints.

100	See B30	
200	See B3040	
300	Membrane assembly modeled by type to specified thickness. Major openings such as shafts and hatches are modeled.	
350	Individual material layers of membrane assembly are modeled separately. All openings and penetrations are modeled. Expansion joints are modeled indicating specific width.	

B3040.50 – Wear Surfaces

Wearing surfaces on top of horizontal waterproofing membrane that are suitable for pedestrian or vehicular traffic.

100	See B30	
200	See B3040	
300	Wear surface system modeled by type to specified thickness/depth. Major openings such as shafts and hatches are modeled.	
350	Individual system elements are modeled separately. Pedestals are modeled and located properly, if applicable. Expansion joints are modeled indicating specific width.	

B3040.90 – Horizontal Enclosure Supplementary Components

Includes substrate board, deck insulation, vapor retarder, sheet metal flashing and trim, flexible flashing, and expansion joints to be included with horizontal enclosure elements above as appropriate.

These components are typically modeled as part of other assemblies listed in the tables above. Do not assign this Uniformat classification unless a supplementary component is modeled independently of another assembly.

B3060 – Horizontal Openings

100	See B30	
200	See B2020	

B3060.10 – Roof Windows and Skylights

[See [B2020.10](#)]

B3060.50 – Vents and Hatches

Other roof openings such as roof hatches, smoke vents, and gravity roof ventilators.

[See [B3020.10](#)]

B3060.90 – Horizontal Opening Supplementary Components

Includes: Frames, hardware, glazing, flashing, and joint sealants to be included with horizontal opening elements above as appropriate.

These components are typically modeled as part of other assemblies listed in the tables above. Do not assign this Unifomat classification unless a supplementary component is modeled independently of another assembly.

B3080 – Overhead Exterior Enclosures

100	See B30	
200	Generic assemblies indicative of overall scope and approximate thickness/system depth of overhead enclosure.	

B3080.10 – Exterior Ceilings

100	See B30	
200	See B3080	
300	Overall assembly modeled to specific system thickness including structural backing. Location of expansion or control joints indicated, but not modeled.	
350	Face material modeled to specific thickness. Structural backing members including bracing/lateral framing/kickers are modeled. Expansion or control joints are modeled to indicate specific width.	
400	Individual elements of face material are modeled. Structural backing members and all support members (kickers) are modeled including all connections. Expansion or control joints are modeled.	

B3080.20 – Exterior Soffits

[See [B3080.10](#)]

B3080.30 – Exterior Bulkheads

[See [B3080.10](#)]

C: INTERIORS

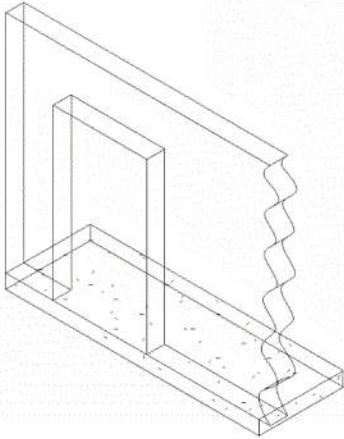

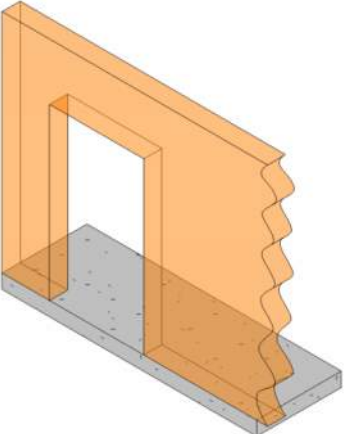

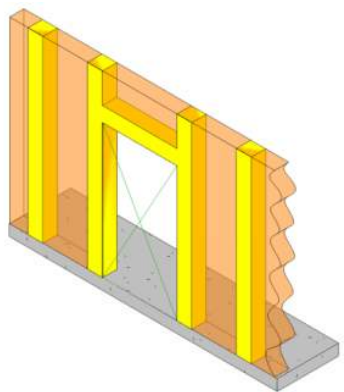

C10 Interior Construction

100	A schematic model element or symbol that is not distinguishable by type or material. Types, layouts, and locations are still flexible.	
-----	---	--

C1010 – Interior Partitions

100	See C10	
200	Generic wall objects separated by type of material (e.g. gypsum board vs. masonry). Approximate overall wall thickness represented by a single assembly. Layouts, locations, heights, and elevation profiles are still flexible.	

C1010 – Interior Wall (Masonry)

100	See C10	
200	See C1010	 <p data-bbox="982 730 1469 756"><i>75 C1010.04-LOD-200 Interior Wall (Masonry)</i></p>
300	<p>Element modeling to include:</p> <ul style="list-style-type: none"> • floor element with design-specified locations and geometries <p>Required non-graphic information associated with model elements includes:</p> <ul style="list-style-type: none"> • Member size, depth, and material with sloping geometry • Spacing and end elevations • Design loads • Deflection criteria 	 <p data-bbox="982 1260 1469 1285"><i>76 C1010.04-LOD-300 Interior Wall (Masonry)</i></p>
350	<p>Element modeling to include:</p> <ul style="list-style-type: none"> • Members modeled at any interface with wall edges (top, bottom, sides) or opening through wall • Any regions that would impact coordination with other systems such as but not limited to: <ul style="list-style-type: none"> ○ Bond Beam & Lintel Regions ○ Reinforcing & Embed Regions ○ Jam Regions 	 <p data-bbox="982 1753 1469 1778"><i>77 C1010.04-LOD-350 Interior Wall (Masonry)</i></p>

400

Element modeling to include:

- Reinforcing
- Connections
- Grouting Material
- Jams
- Bond Beams
- Lintels
- Member fabrication part number
- Any part required for complete installation

78 C1010.04-LOD-400 Interior Wall (Masonry)

C1010 – Interior Wall (Cold-Form Metal Framing)

100	See C10	
200	See C1010	 <p data-bbox="886 674 1458 730"><i>79 C1010.05-LOD-200 Interior Wall (Cold-Form Metal Framing)</i></p>
300	See C1010	 <p data-bbox="898 1226 1469 1283"><i>80 C1010.05-LOD-300 Interior Wall (Cold-Form Metal Framing)</i></p>

350

Cold formed metal framing is developed with sufficient elements to support detailed interface coordination with other systems such as MEP.

Image notes:

- 1) *Elements in red are critical wall support elements that cannot be easily cut for coordination of MEP opening through the walls.*
- 2) *Diagonal bracing (kickers) that may be in the above ceiling space are modeled for coordination with other building content such as MEP passing along the wall in the above ceiling spaces.*
- 3) *Infill CFMF modeling (Orange) may be omitted at this LOD if stated in the BXP.*
- 4) *Cladding and sheathing are not shown for clarity in this image.*

81 C1010.05-LOD-350 Interior Wall (Cold-Form Metal Framing)

400

Cold formed metal framing is developed with sufficient elements that support the fabrication of the CFMF system.

Image notes:

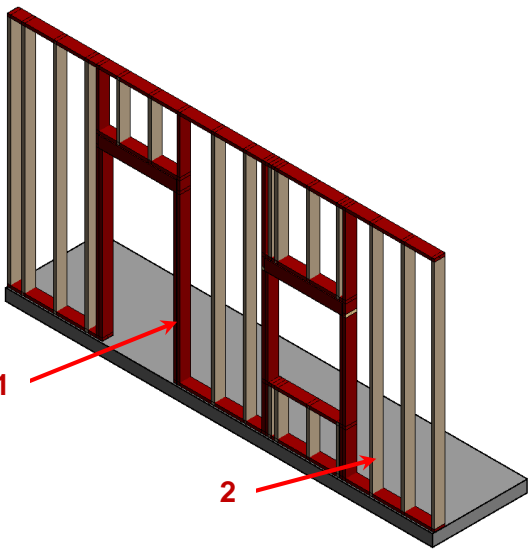

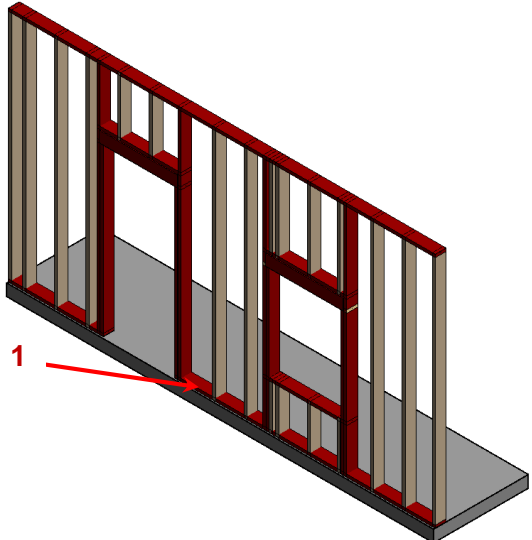

- 1) *Connection content is development in the wall elements. This includes but is not limited to fasteners, clips, and other related hardware.*
- 2) *Cladding and sheathing are not shown for clarity in this image.*

82 C1010.05-LOD-400 Interior Wall (Cold-Form Metal Framing)

C1010 – Interior Wall (Wood)

100	See C10	
200	See C1010	 <p data-bbox="917 747 1377 779"><i>83 C1010.06-LOD-200 Interior Wall (Wood)</i></p>
300	See C1010	 <p data-bbox="922 1377 1382 1409"><i>84 C1010.06-LOD-300 Interior Wall (Wood)</i></p>

<p>350</p>	<p>Wood framing is developed with sufficient elements to support detailed interface coordination with other systems such as MEP.</p> <p><i>Image notes:</i></p> <ol style="list-style-type: none">1) <i>Elements in red are critical wall support elements that cannot be easily cut for coordination of MEP opening through the walls.</i>2) <i>Infill wood framing modeling may be omitted at this LOD if stated in the BXP.</i>3) <i>Cladding and sheathing are not shown for clarity in this image.</i>	 <p>85 C1010.06-LOD-350 Interior Wall (Wood)</p>
<p>400</p>	<p>Wood framing is developed with sufficient elements that support the fabrication of the wood framing system.</p> <p><i>Image notes:</i></p> <ol style="list-style-type: none">1) <i>Connection content is development in the wall elements. C1010.10 – Interior Fixed Partitions

100	See C10	
200	See C1010	
300	<p>Composite model assembly by type with overall thickness that accounts for framing and finish specified for the wall system. (Refer to LOD350 and LOD400 for individually modeled elements)</p> <p>Wall elements are modeled to specific layouts, locations, heights, and elevation profiles. Penetrations are modeled to nominal dimensions for major wall openings such as windows, doors, and large mechanical elements.</p> <p>Required non-graphic information associated with model elements includes:</p> <ul style="list-style-type: none"> • Wall type • Fire rating 	
350	<p>Structure and finish layers of partition assembly modeled as separate elements.</p> <p>All openings modeled to rough dimensions.</p> <p>Major framing elements such as king studs, kickers, diagonal bracing, and headers are modeled.</p>	
400	<p>Element modeling to include:</p> <ul style="list-style-type: none"> • Studs and tracks • Bracing • Insulation • Sheathing or wall boards • Openings/penetrations 	

C1010.20 – Interior Glazed Partitions

100	See C10	
200	See C1010	
300	<p>Specified location and orientation of face of glass.</p> <p>Nominal face dimensions and thickness of glazing.</p> <p>Structural support systems of wall to be modeled.</p> <p>Spacing, location, size and orientation of mullions.</p> <p>Operable components defined (doors) and included in model.</p>	
350	<ul style="list-style-type: none"> • Mullion shapes and geometry defined. • Actual anchorage layouts and types defined. • Actual panel dimensions (including seating). 	
400	<ul style="list-style-type: none"> • Complete mullion extrusion profiles. • Interface details between wall systems (within) and wall and support systems. 	

C1010.40 – Interior Demountable Partitions

100	See C10	
200	See C1010	
300	See C1010.10	

350	See C1010.10 – also include hardware, accessories, and support structure.	
400	See C1010.10	

C1010.50 – Interior Operable Partitions

100	See C10	
200	See C1010	
300	Operable partition system modeled to include spatial requirements for open/storage position and closed position. Spatial requirements for structure (overhead or below) to be modeled.	
350	Major support elements (overhead or below) Mechanical connections	
400	All assembly components including tracks, panels, hardware and supports.	

C1010.70 – Interior Screens

Portable and open dividers.

[See [C1010.10](#)]

C1010.90 – Interior Partitions Supplementary Components

Sound isolation components, firestopping, and expansion control to be included with interior partition elements above as appropriate.

These components are typically modeled as part of other assemblies listed in the tables above. Do not assign this Uniformat classification unless a supplementary component is modeled independently of another assembly.

C1020 – Interior Windows

100	See C10	
200	Windows approximate in terms of location, size, count and type. Units are modeled as a simple, monolithic component; or represented with simplified frame and glazing. Nominal unit size is provided.	

C1020.10 – Interior Operating Windows

100	See C10	
200	See C1020	
300	Units are modeled based on specified location and nominal size. Outer geometry of window frame elements and glazing modeled. Operation is indicated. Non-graphic information associated with model element: <ul style="list-style-type: none"> • Aesthetic characteristics (finishes, glass types) • Performance characteristics (i.e. U-value, wind loading, blast resistance, structural, air, thermal, water, sound) • Functionality of the window (fixed, casement, double/single hung, awning/project out, pivot, sliding) 	
350	Rough opening dimensions Attachment method of window to structure Embed geometry	
400	Frame profiles Glazing sub-components (gaskets) Attachment components	

C1020.20 – Interior Fixed Windows

[See [C1020.10](#)]

C1020.50 – Interior Special Function Windows

[See [C1020.10](#)]

C1020.90 – Interior Window Supplementary Components

Frames, sills, operating hardware, glazing to be included with interior window elements above as appropriate.

These components are typically modeled as part of other assemblies listed in the tables above. Do not assign this Unifomat classification unless a supplementary component is modeled independently of another assembly.

C1030 – Interior Doors

100	See C10	
200	Units are modeled as a simple, monolithic component; or represented with simple frame and panel. Nominal unit size is provided.	

C1030.10 – Interior Swinging Doors

100	See C10	
200	See C1030	
300	Door assemblies modeled by type to include the following: <ul style="list-style-type: none"> • Specific door panels and frames (if applicable). • Hardware set functionality and types are specified in non-graphic information. • Operation is specified • Spatial requirements for operation are modeled. 	
350	Rough opening is modeled in containing wall. Major framing elements are modeled at jambs and head in containing wall. Operation or mechanism enclosures are modeled, if applicable.	
400	Actual frame/mullion extrusions. Actual panel size dimensions. All connections and interfaces modeled including brackets, supports, sealants, and thresholds.	

C1030.20 – Interior Entrance Doors

Exterior personnel door assemblies at interior main entrances. Includes automatic, revolving, balanced, and other special operating entrance doors, and sliding storefront wall systems. Includes Interior Door Supplementary Components as appropriate when not part of storefront system.

[See [B2050.10](#)]

C1030.25 – Interior Sliding Doors

[See [C1030.10](#)]

C1030.30 – Interior Folding Doors

[See [C1030.10](#)]

C1030.40 – Interior Coiling Doors

100	See C10	
200	See C1030	
300	Coiling door assemblies modeled by type to include the following: <ul style="list-style-type: none"> • Door panels with nominal dimensions. • Frames with nominal dimensions. • Hardware set functionality and types included in non-graphic information. • Clearance zones are modeled for operation of overhead doors. • Enclosures and motor housings are modeled with overall nominal dimensions. 	
350	Rough opening is modeled (if applicable). Major framing elements in wall are modeled at jambs and head. Other major structural support elements are modeled.	
400	All connections and interfaces modeled including brackets, supports, sealants, and thresholds.	

C1030.50 – Interior Panel Doors

Interior large opening doors constructed of panels that move.

[See [C1030.40](#)]

C1030.70 – Interior Special Function Doors

Interior door assemblies for a variety of special functions and applications involving a variety of operating methods. Includes Interior Door Supplementary Components as appropriate.

[See [C1030.40](#)]

C1030.80 – Interior Access Doors and Panels

[See [C1030.40](#)]

C1030.90 – Interior Door Supplementary Components

Frames, hardware, glazing, and louvers that are part of door to be included with interior door elements above as appropriate.

These components are typically modeled as part of other assemblies listed in the tables above. Do not assign this Unifomat classification unless a supplementary component is modeled independently of another assembly.

C1040 – Interior Grilles and Gates

100	See C10	
200	See C1030	

C1040.10 – Interior Grilles

100	See C10	
200	See C1030	
300	Grille assemblies modeled by type to include the following: <ul style="list-style-type: none"> Nominal size of unit. Required openness provided as non-graphic information. Operation is specified graphically and with non-graphic information, if applicable. 	
350	Rough opening is modeled (if applicable). Major framing elements are modeled at jambs and head.	
400	All connections and interfaces modeled including brackets, supports, sealants, and thresholds.	

C1040.50 – Interior Gates

[See [C1040.10](#)]

C1060 – Raised Floor Construction

100	See C10	
200	Generic assembly that contains spatial (layer) allowance for support system and flooring material.	

C1060.10 – Access Flooring

100	See C10	
200	See C1060	
300	Overall flooring assembly modeled by type to specified thickness/depth. Major openings such as shafts are modeled.	
350	Individual layers of assembly are modeled separately. All openings and penetrations are modeled. Expansion joints are modeled indicating specific width. Pedestals are modeled and located properly, if applicable.	
400	All assembly components are modeled including frame, floor tiles, pedestals, and cross bracing.	

C1060.30 – Platform/Stage Floors

[See [C1060.10](#)]

C1070 – Suspended Ceiling Construction

100	Ceiling construction is represented in other composite objects such as floors or rooms; or, schematic model elements that are not distinguishable by type or material. Assembly depth/thickness and locations still flexible.	
200	Generic assemblies indicative of overall scope and approximate thickness/system depth of suspended ceiling.	

C1070.10 – Acoustical Suspended Ceilings

100	See C1070	
200	See C1070	
300	Overall assembly modeled to specific system thickness including structural backing. Location of expansion or control joints indicated, but not modeled.	
350	Ceiling suspension grid is modeled. Structural backing members including bracing/lateral framing/kickers are modeled. Expansion or control joints are modeled to indicate specific width.	
400	All assembly components are modeled including tees, hangers, support structure, and tiles.	

C1070.20 – Suspended Plaster and Gypsum Board Ceilings

100	See C1070	
200	See C1070	
300	Overall assembly modeled to specific system thickness including framing. Major penetrations are modeled.	
350	Major bracing elements or kickers.	
400	All assembly components including furring channels, hangers, lath, plaster coats, and gypsum boards.	

C1070.50 – Specialty Suspended Ceilings

[See [C1070.10](#) or [C1070.20](#)]

C1070.70 – Special Function Suspended Ceilings

[See [C1070.10](#) or [C1070.20](#)]

C1070.90 – Ceiling Suspension Components

Hangers and framing to suspend ceiling and sound isolation components to be included with suspended ceiling construction elements above as appropriate.

These components are typically modeled as part of other assemblies listed in the tables above. Do not assign this Unifomat classification unless a supplementary component is modeled independently of another assembly.

C1090 – Interior Specialties

100	See C10	
-----	-------------------------	--

200	<p>Generic model elements with approximate nominal size.</p> <p>Placement and quantity remains flexible.</p> <p>Required non-graphic information associated with model elements includes included with element:</p> <ul style="list-style-type: none"> • Type of object 	
-----	--	--

C1090.10 – Interior Railings and Handrails

100	See C10	
200	Generic model element representing approximate overall height and location of railing/handrail.	
300	<p>Railing/handrail systems modeled by type to include:</p> <ul style="list-style-type: none"> • All horizontal rails • All vertical posts/balusters 	
350	Mounting/attachment components	
400	All assembly components including fasteners and supports.	

C1090.15 – Interior Louvers

Interior louvers, and other items for ventilation which are not an integral part of the mechanical system. Includes operable and stationary louvers.

100	See C10	
200	Generic model element that is indicative of approximate area and location of louver.	
300	Louver assembly modeled by type, indicative of area and location of intended louver/vent. Includes accurate frame (boundary dimensions) and blades. Opening for louver is cut from host wall. Performance level defined in non-graphic information (e.g. storm proof or not, free air).	
350	Rough opening is modeled (if applicable) Major framing elements are modeled at jambs and head. Connection points are modeled.	
400	All connections and interfaces modeled including brackets, supports, and sealants.	

C1090.20 – Information Specialties

Visual display units, display cases, directories, interior signage, telephone specialties, and informational kiosks.

[See [Fundamental LOD Definitions](#)]

C1090.25 – Compartments and Cubicles

Manufactured compartments and cubicles for specific purposes. Includes toilet compartments, shower stalls, etc.

[See [Fundamental LOD Definitions](#)]

C1090.30 – Service Walls

Wall assemblies and wall-mounted units incorporating services.

[See [C1010.10](#)]

C1090.35 – Wall and Door Protection

Manufactured protective devices for walls and doors. Includes corner guards, bumper guards, and protective wall covering.

[See [Fundamental LOD Definitions](#)]

C1090.40 – Toilet, Bath and Laundry Accessories

Manufactured items for use in conjunction with toilets, baths, and laundries.

[See [Fundamental LOD Definitions](#)]

C1090.45 – Interior Gas Lighting

[See [Fundamental LOD Definitions](#)]

C1090.50 – Fireplaces and Stoves

[See [Fundamental LOD Definitions](#)]

C1090.60 – Safety Specialties

[See [Fundamental LOD Definitions](#)]

C1090.70 – Storage Specialties

[See [Fundamental LOD Definitions](#)]

C1090.90 – Other Interior Specialties

[See [Fundamental LOD Definitions](#)]

C20 Interior Finishes

100	Non-graphic information attached to model elements providing assumptions about proposed finish materials.	
-----	---	--

C2010 – Wall Finishes

100	See C20	
200	Generic materials by type (e.g. tile or paneling), approximate thickness and scope in elevation. Generally, materials over 0.25" (10mm) thick are modeled.	
300	Materials are modeled based on specific types (e.g. Tile type CT-1). Thickness and scope are accurately modeled.	
350	Additional non-graphic information to include: <ul style="list-style-type: none"> • Manufacturer • Model 	
400	Pattern layouts Expansion/control joints Edges	

C2010.10 –Tile Wall Finish

[See [C2010](#)]

C2010.20 – Wall Paneling

[See [C2010](#)]

C2010.30 – Wall Coverings

[See [C2010](#)]

C2010.35 – Wall Carpeting

[See [C2010](#)]

C2010.50 – Stone Facing

[See [C2010](#)]

C2010.60 – Special Wall Surfacing

[See [C2010](#)]

C2010.70 – Wall Painting and Coating

[See [C2010](#)]

C2010.80 – Acoustical Wall Treatment

[See [C2010](#)]

C2010.90 – Wall Finish Supplementary Components

Furring to be included with wall finish elements above as appropriate.

[See [C1010](#)]

C2020 – Interior Fabrications

[See [Fundamental LOD Definitions](#)]

C2030 – Flooring

[See [C2010](#)]

C2040 – Stair Finishes

[See [C2010](#)]

C2050 – Ceiling Finishes

[See [C1070](#)]

D: SERVICES

D10 Conveying

100	Schematic model elements that are not distinguishable by type or material. Component sizes and locations still flexible.	
-----	---	--

D1010 – Vertical Conveying Systems

100	See D10	
200	Generic representation of the system envelope, including critical path of travel zones.	

D1010.10 – Elevators

100	See D10	
200	See D1010	
300	Specific system elements modeled by type, including all path of travel zones. Pits and/or control rooms and associated equipment to be modeled if applicable. Major structural support elements modeled. Connections to mechanical or electrical services. Non-graphic information to be included with modeled elements: <ul style="list-style-type: none"> • Type code (referenced in specifications) • ClearWidth • ClearDepth • ClearHeight 	
350	Sizing adjusted to the actual manufacturer specifications. Guiding tracks/rails Service/access zones	
400	All connections, supports, framing, and other supplementary components.	

D1010.20 – Lifts

D5010.20 – Battery Equipment

Description: Batteries, battery racks, battery chargers, static power converters, uninterruptible power supplies, and accessories.

[See [D5010.10](#)]

D5010.30 – Photovoltaic Collectors

Description: Solar cells to convert sunlight to electricity.

[See [D5010.10](#)]

D5010.40 – Fuel Cells

Description: Fuel cell electricity generating equipment.

[See [D5010.10](#)]

D5010.70 – Transfer Switches

Description: Switches that transfer from one source of electricity to another.

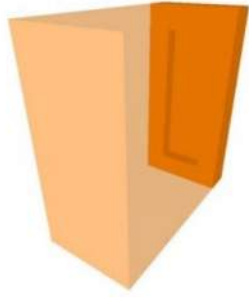

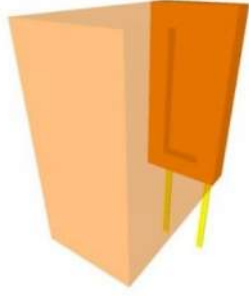

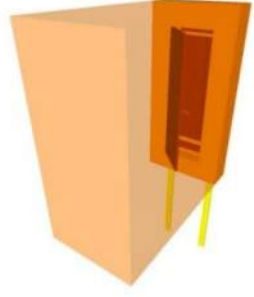

[See [D5010.10](#)]

D5020 – Electrical Service and Distribution

100	See D50	
200	Schematic layout with approximate size, shape, and location of equipment; approximate access/code clearance requirements modeled; design performance parameters as defined in the BIMXP to be associated with model elements as non-graphic information.	

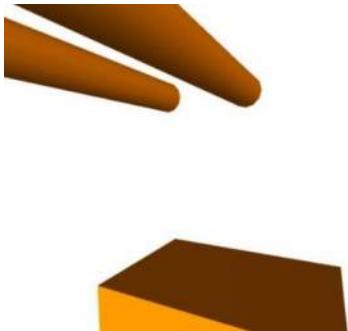

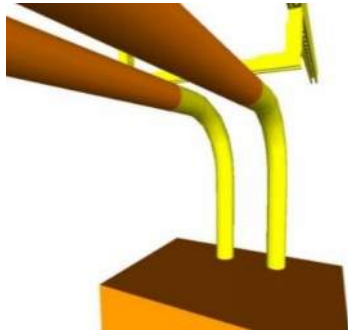

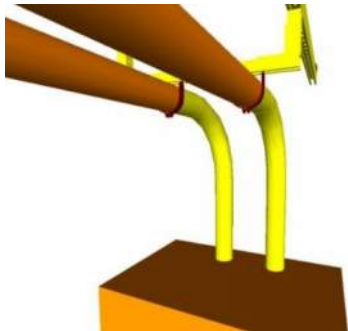

D5020.10 – Electrical Service Entrance

Description: Meters, substations, transformers, switchgear, switchboards, and protective devices where electrical power enters structure.

100	See D50	
200	See D5020	
300	<p>Modeled as design-specified size, shape, spacing, and location of equipment and associated components;</p> <p>approximate allowances for spacing and clearances required for all specified supports and seismic control;</p> <p>actual access/code clearance requirements modeled.</p>	 <p><i>173 D5020.10-LOD-300 Electrical Service Entrance</i></p>
350	<p>Modeled as actual size, shape, spacing, and location of equipment and associated components;</p> <p>actual size, shape, spacing, and location for supports and seismic control;</p> <p>actual size, shape, and location/connections of equipment and support structure/pads.</p>	 <p><i>174 D5020.10-LOD-350 Electrical Service Entrance</i></p>
400	<p>Supplementary components added to the model required for fabrication and field installation.</p>	 <p><i>175 D5020.10-LOD-400 Electrical Service Entrance</i></p>

D5020.30 – Power Distribution

Description: Bus assemblies, distribution equipment, and electrical wiring system to distribute electrical power to switchboards, panelboards, and motor control centers.

100	See D50	
200	See D5020	
300	<p>Modeled as design-specified size, shape, spacing, and location of raceways, boxes, enclosures, and equipment; approximate allowances for spacing and clearances required for all specified hangers, supports and seismic control; actual access/code clearance requirements modeled.</p>	 <p>176 D5020.30-LOD-300 Power Distribution</p>
350	<p>Modeled as actual size, shape, spacing, and location of raceways, boxes, and enclosures; actual size, shape, spacing, and location for supports and seismic control; actual size, shape, and location/connections of equipment and support structure/pads; actual floor and wall penetrations are modeled.</p>	 <p>177 D5020.30-LOD-350 Power Distribution</p>
400	<p>Supplementary components added to the model required for fabrication and field installation.</p>	 <p>178 D5020.30-LOD-400 Power Distribution</p>

D5020.70 – Facility Grounding

Description: Raceways, wiring and devices for grounding and bonding an electrical distribution system.

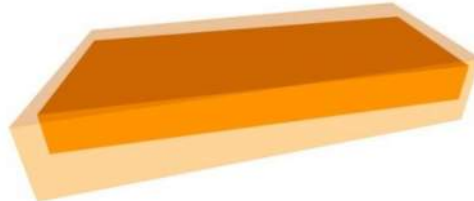

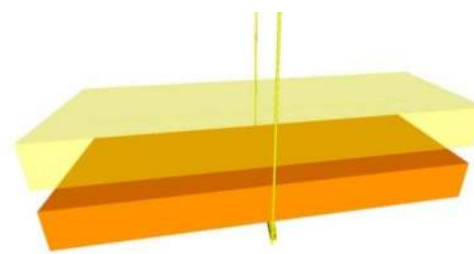

100	See D50	
200	See D5020	
300	Modeled as design-specified size, shape, spacing, and location of raceways, boxes, enclosures, and the electrical equipment and end-devices served; approximate allowances for spacing and clearances required for all specified hangers, supports, and seismic control; actual access/code clearance requirements modeled.	
350	Modeled as actual size, shape, spacing, and location of raceways, boxes, enclosures, and the electrical equipment and end-devices served; actual size, shape, spacing, and location for supports and seismic control; actual floor and wall penetrations are modeled.	
400	Supplementary components added to the model required for fabrication and field installation.	

D5030 – General Purpose Electrical Power

100	See D50	
200	Schematic layout with approximate size, shape, and location of equipment; approximate access/code clearance requirements modeled; design performance parameters as defined in the BIMXP to be associated with model elements as non-graphic information.	

D5030.10 – Branch Wiring System

Description: Raceways, ducts, cable trays, and wiring to deliver power from branch panelboards to the point of use.

100	See D50	
200	See D5030	
300	Modeled as design-specified size, shape, spacing, and location of raceways, boxes, and enclosures; approximate allowances for spacing and clearances required for all specified hangers, supports and seismic control; actual access/code clearance requirements modeled.	 <p><i>179 D5030.10-LOD-300 Branch Wiring System</i></p>
350	Modeled as actual size, shape, spacing, and location of raceways, boxes, enclosures; actual size, shape, spacing, and location for supports and seismic control; actual floor and wall penetrations are modeled.	 <p><i>180 D5030.10-LOD-350 Branch Wiring System</i></p>
400	Supplementary components added to the model required for fabrication and field installation.	

D5030.50 – Wiring Devices

Description: Electrical devices at point of use including electrical outlets and switches.

100	See D50	
200	See D5030	
300	Modeled as design-specified size, shape, spacing, and location of outlet boxes and devices; actual access/code clearance requirements modeled.	
350	Modeled as actual size, shape, spacing, and location of outlet boxes and devices.	
400	Supplementary components added to the model required for fabrication and field installation.	

D5040 – Lighting

100	See D50	
200	Schematic layout with approximate size, shape, and location of equipment; approximate access/code clearance requirements modeled;	

	design performance parameters as defined in the BIMXP to be associated with model elements as non-graphic information.	
--	--	--

D5040.10 – Lighting Control

Description: Clock and calendar, photoelectric switches, occupancy sensors, and light-leveling control devices.

100	See D50	
200	See D5040	
300	Modeled as design-specified size, shape, spacing, and location of enclosures, equipment, and devices; actual access/code clearance requirements modeled.	
350	Modeled as actual size, shape, spacing, and location of enclosures, equipment, and control devices; actual size, shape, and location/connections of equipment and control devices.	
400	Supplementary components added to the model required for fabrication and field installation.	

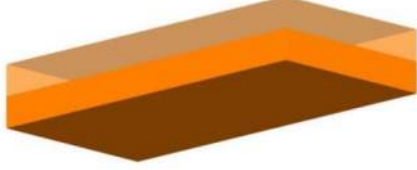

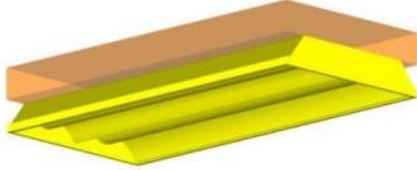

D5040.20 – Branch Wiring for Lighting

Description: Raceways, ducts, trays, and wiring beyond branch circuit panelboards to lighting fixtures.

100	See D50	
200	See D5040	
300	Modeled as design-specified size, shape, spacing, and location of raceways, boxes, and enclosures to fixture locations; approximate allowances for spacing and clearances required for all specified hangers, supports, and seismic control.	
350	Modeled as actual size, shape, spacing, and location of raceways, boxes, and enclosures to fixture locations; actual size, shape, spacing, and location for supports and seismic control; actual floor and wall penetrations are modeled.	
400	Supplementary components added to the model required for fabrication and field installation.	

D5040.50 – Lighting Fixtures

Description: Luminaires, lighting equipment, ballasts, and accessories. Includes fluorescent, high intensity discharge, incandescent, mercury vapor, neon, and sodium vapor lighting.

100	See D50	
200	See D5040	
300	Modeled as design-specified size, shape, spacing, and location of lighting fixtures; approximate allowances for spacing and clearances required for all specified hangers, supports and seismic control; actual access/code clearance requirements modeled.	 <p>181 D5040.50-LOD-300 Lighting Fixtures</p>
350	Modeled as actual size, shape, spacing, and location of lighting fixtures. actual size, shape, spacing, and location for supports and seismic control.	 <p>182 D5040.50-LOD-350 Lighting Fixtures</p>
400	Supplementary components added to the model required for fabrication and field installation.	

D5080 – Miscellaneous Electrical Systems

100	See D50	
200	Schematic layout with approximate size, shape, and location of equipment; approximate access/code clearance requirements modeled; design performance parameters as defined in the BIMXP to be associated with model elements as non-graphic information.	

D5080.10 – Lightning Protection

Description: Wiring and equipment for lightning protection.

100	See D50	
200	See D5080	
300	<p>Modeled as design-specified size, shape, spacing, and location of raceways, boxes, enclosures including the electrical equipment and end-devices served;</p> <p>approximate allowances for spacing and clearances required for all specified hangers, supports and seismic control;</p> <p>actual access/code clearance requirements modeled.</p>	
350	<p>Modeled as actual size, shape, spacing, and location of raceways, boxes, enclosures including the electrical equipment, fixtures, and end-devices served</p> <p>actual size, shape, spacing, and location for supports and seismic control;</p> <p>actual size, shape, and location/connections of equipment and support structure/pads;</p> <p>actual floor and wall penetrations are modeled.</p>	
400	Supplementary components added to the model required for fabrication and field installation.	

D5080.70 – Transient Voltage Suppression

Description: Devices to protect against voltage surges on electrical distribution systems.

100	See D50	
200	See D5080	
300	Modeled as design-specified size, shape, spacing, and location of equipment; approximate allowances for spacing and clearances required for all specified hangers, supports and seismic control; actual access/code clearance requirements modeled.	
350	Modeled as actual size, shape, spacing, and location of the equipment; actual size, shape, spacing, and location for supports and seismic control.	
400	Supplementary components added to the model required for fabrication and field installation.

G3090 – Liquid and Gas Site Utilities Supplementary Components

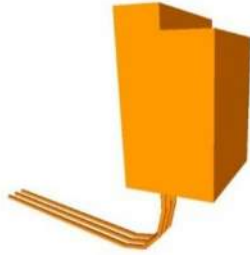

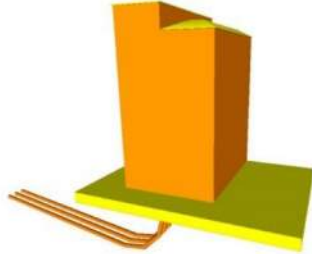

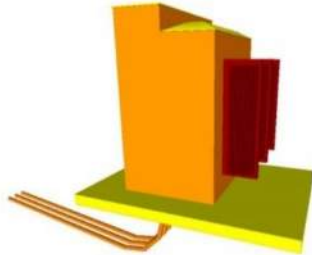

These components are typically modeled as part of other assemblies listed in the tables above. Do not assign this Unifomat classification unless a supplementary component is modeled independently of another assembly.

G40 Electrical Site Improvements

100	Diagrammatic or schematic model elements: conceptual and/or schematic layout; design performance parameters as defined in the BIMXP to be associated with model elements as non-graphic information.	
-----	--	--

G4010 – Site Electric Distribution Systems

Description: Electrical wiring systems to distribute electrical power to on the Site. Includes Duct Banks, Pullboxes, vaults and transformers from the utility point of connection, to the building's main electric room.

100	See G40	
200	Generic model elements in schematic layout with: approximate size, shape, and location of equipment; approximate access/code clearance requirements modeled; design performance parameters as defined in the BIMXP to be associated with model elements as non-graphic information.	
300	Modeled as design-specified size, shape, spacing, and location of raceways/ boxes/enclosures/duct banks in the power distribution system specified size, shape, spacing, and location of equipment and associated components; approximate allowances for spacing and clearances required for all specified hangers, supports and seismic control access/code clearance requirements modeled	 <p><i>184 G4010-LOD-300 Site Electric Distribution Systems</i></p>
350	Modeled as actual size, shape, spacing, and location of raceways/ boxes/enclosures/duct banks in the power distribution system; actual size, shape, spacing, and location for supports and seismic control; actual size, shape, and location/connections of equipment and support structure/pads.	 <p><i>185 G4010-LOD-350 Site Electric Distribution Systems</i></p>
400	Supplementary components added to the model required for fabrication and field installation.	 <p><i>186 G4010-LOD-400 Site Electric Distribution Systems</i></p>

G4050 – Site Lighting

Description: Luminaires, lighting equipment, ballasts, and accessories. Includes fluorescent, high intensity discharge, incandescent, mercury vapor, neon, and sodium vapor lighting. Includes Pole Mount, Building Mount and on-grade fixtures for exterior lighting.

100	See G40	
200	Generic elements in schematic layout with: approximate size, shape, and location of equipment; approximate access/code clearance requirements modeled; design performance parameters as defined in the BIMXP to be associated with model elements as non-graphic information.	
300	Modeled as design-specified size, shape, spacing, and location of lighting fixtures; approximate allowances for spacing and clearances required for all specified hangers, supports and seismic control; required pole bases and footing elements; access/code clearance requirements modeled.	
350	Modeled as actual size, shape, spacing, and location of lighting fixtures; actual size, shape, spacing, and location for supports and seismic control; actual size, shape, and location/connections of equipment and support structure/pads.	
400	Supplementary components added to the model required for fabrication and field installation.	

G50 Site Communications

100	<p>Diagrammatic or schematic model elements: conceptual and/or schematic layout; design performance parameters as defined in the BIMXP to be associated with model elements as non-graphic information.</p>	
-----	---	--

G5010 – Site Communications Systems

Description: Conduit Systems for routing of Communication trunk systems.

100	See G50	
200	<p>Generic elements in a schematic layout with: approximate size, shape, and location of equipment; approximate access/code clearance requirements modeled; design performance parameters as defined in the BIMXP to be associated with model elements as non-graphic information.</p>	
300	<p>Modeled as design-specified size, shape, spacing, and location of raceways, boxes, and enclosures in the power distribution system; size, shape, spacing, and location of equipment and associated components; approximate allowances for spacing and clearances required for all specified hangers, supports and seismic control; access/code clearance requirements modeled.</p>	
350	<p>Modeled as actual size, shape, spacing, and location of raceways, boxes, and enclosures in the power distribution system; size, shape, spacing, and location for supports and seismic control; size, shape, location, and connections of equipment and support structure or pads; floor and wall penetrations are modeled.</p>	
400	Supplementary components added to the model required for fabrication and field installation.

Appendix

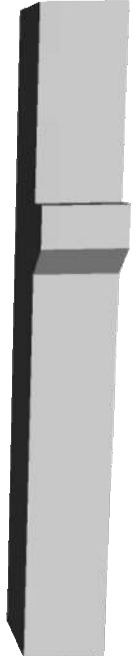

The appendix section contains content that is developed in collaboration with industry organizations, leading expert practitioners, and feedback from committees following the issue of the April 2015 Draft. They are being released in the Appendix of this edition of the LOD Specification for public comment and use. They are proposed for the main body of the next submission of the LOD Specification. The following elements shall be modeled in accordance with these additional pages when the LOD Specification is used.

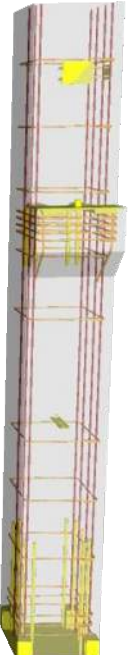

B1010.10 – Precast Structural Inverted T Beam (Concrete)

100	See B10	
200	<p>Element modeling to include:</p> <ul style="list-style-type: none"> • Type of structural concrete system • Approximate geometry (e.g. depth) of structural elements 	 <p><i>B1010.10-LOD 200 Precast Structural Inverted T Beam (Concrete)</i></p>
300	<p>Element modeling to include:</p> <ul style="list-style-type: none"> • Specific sizes and locations of main concrete structural members modeled per defined structural grid with correct orientation • Concrete defined per spec (strength, air entrainment, aggregate size, etc.) • All sloping surfaces included in model element with exception of elements affected by manufacturer selection <p>Required non-graphic information associated with model elements includes:</p> <ul style="list-style-type: none"> • Penetrations for items such as MEP • Finishes, camber, chamfers, etc. • Typical details • Embeds and anchor rods • Aggregate, clear cover • Reinforcing spacing • Reinforcing • Live loads 	 <p><i>B1010.10-LOD 300 Precast Structural Inverted T Beam (Concrete)</i></p>

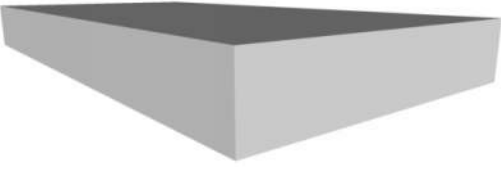

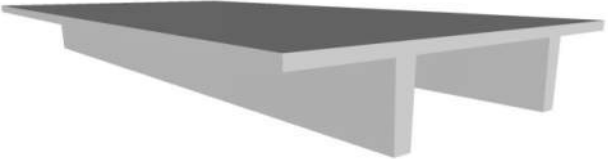

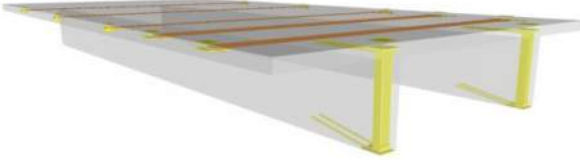

350	<p>Element modeling to include:</p> <ul style="list-style-type: none">• Reinforcing Post-tension profiles and strand locations• Reinforcement called out, modeled if required by the BIMXP, typically only in congested areas• Pour joints and sequences to help identify reinforcing lap splice locations, scheduling, etc.• Lifting devices• Expansion Joints• Embeds and anchor rods• Post-tension profile and strands modeled if required by the BIMXP• Penetrations for items such as MEP• Any permanent forming or shoring components	 <p><i>B1010.10-LOD 350 Precast Structural Inverted T Beam (Concrete)</i></p>
400	<p>Element modeling to include:</p> <ul style="list-style-type: none">• All reinforcement including post tension elements detailed and modeled• Finishes, camber, chamfer, etc.	 <p><i>B1010.10-LOD 400 Precast Structural Inverted T Beam (Concrete)</i></p>

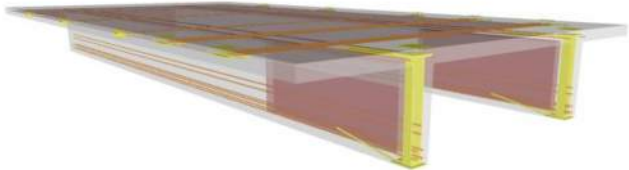

B1010.10 – Precast Structural Column (Concrete)

100	See B10	
200	<p>Element modeling to include:</p> <ul style="list-style-type: none"> • Type of structural concrete system • Approximate geometry (e.g. depth) of structural elements 	 <p><i>B1010.10 - LOD 200 Precast Structural Column (Concrete)</i></p>
300	<p>Element modeling to include:</p> <ul style="list-style-type: none"> • Specific sizes and locations of main concrete structural members modeled per defined structural grid with correct orientation • Concrete defined per spec (strength, air entrainment, aggregate size, etc.) • All sloping surfaces included in model element with exception of elements affected by manufacturer selection <p>Required non-graphic information associated with model elements includes:</p> <ul style="list-style-type: none"> • Penetrations for items such as MEP • Finishes, camber, chamfers, etc. • Typical details • Embeds and anchor rods • Aggregate, clear cover • Reinforcing spacing • Reinforcing • Live loads 	 <p><i>B1010.10 - LOD 300 Precast Structural Column (Concrete)</i></p>

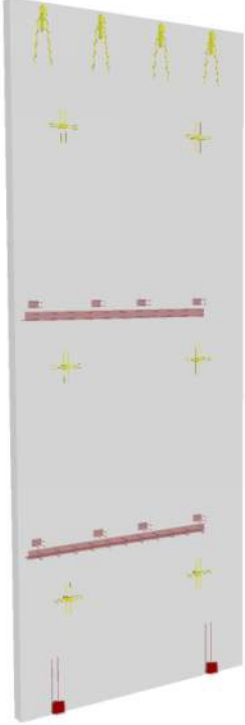

350	<p>Element modeling to include:</p> <ul style="list-style-type: none">• Reinforcing Post-tension profiles and strand locations• Reinforcement called out, modeled if required by the BIMXP, typically only in congested areas• Pour joints and sequences to help identify reinforcing lap splice locations, scheduling, etc.• Expansion Joints• Lifting devices• Embeds and anchor rods• Post-tension profile and strands modeled if required by the BIMXP• Penetrations for items such as MEP• Any permanent forming or shoring components	 <p><i>B1010.10 - LOD 350 Precast Structural Column (Concrete)</i></p>
400	<p>Element modeling to include:</p> <ul style="list-style-type: none">• All reinforcement including post tension elements detailed and modeled• Finishes, camber, chamfer, etc.	 <p><i>B1010.10 - LOD 400 Precast Structural Column (Concrete)</i></p>

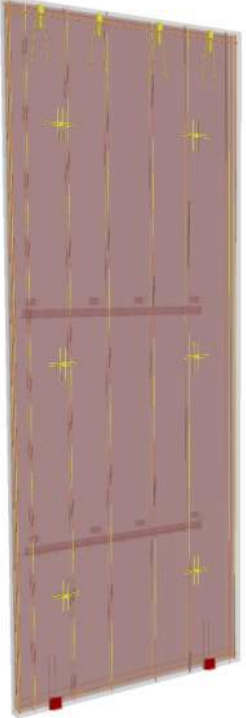

B1010.10 – Precast Structural Double Tee (Concrete)

100	See B10	
200	<p>Element modeling to include:</p> <ul style="list-style-type: none"> Type of structural concrete system Approximate geometry (e.g. depth) of structural elements 	 <p><i>B1010.1 – LOD 200 Precast Structural Double Tee (Concrete)</i></p>
300	<p>Element modeling to include:</p> <ul style="list-style-type: none"> Specific sizes and locations of main concrete structural members modeled per defined structural grid with correct orientation Concrete defined per spec (strength, air entrainment, aggregate size, etc.) All sloping surfaces included in model element with exception of elements affected by manufacturer selection <p>Required non-graphic information associated with model elements includes:</p> <ul style="list-style-type: none"> Penetrations for items such as MEP Finishes, camber, chamfers, etc. Typical details Embeds and anchor rods Aggregate, clear cover Reinforcing spacing Reinforcing Live loads 	 <p><i>B1010.1 – LOD 300 Precast Structural Double Tee (Concrete)</i></p>
350	<p>Element modeling to include:</p> <ul style="list-style-type: none"> Reinforcing Post-tension profiles and strand locations Reinforcement called out, modeled if required by the BIMXP, typically only in congested areas Pour joints and sequences to help identify reinforcing lap splice locations, scheduling, etc. Expansion Joints Lifting devices Embeds and anchor rods Post-tension profile and strands modeled if required by the BIMXP Penetrations for items such as MEP Any permanent forming or shoring components 	 <p><i>B1010.1 – LOD 350 Precast Structural Double Tee (Concrete)</i></p>

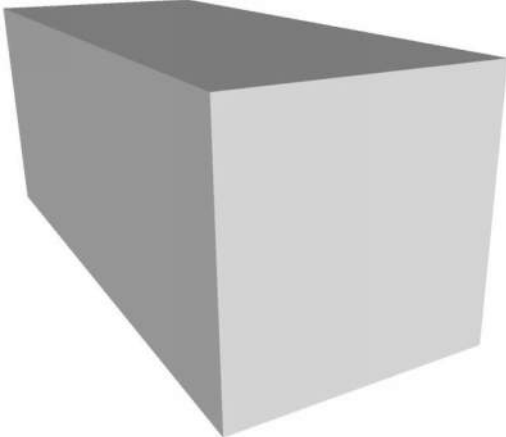

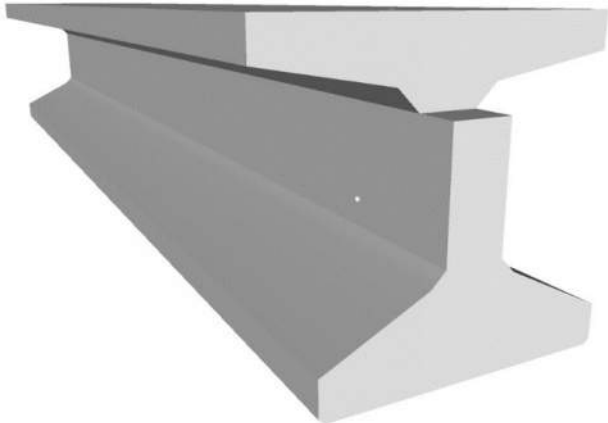

400	<p>Element modeling to include:</p> <ul style="list-style-type: none">• All reinforcement including post tension elements detailed and modeled• Finishes, camber, chamfer, etc.	 <p><i>B1010.1 – LOD 400 Precast Structural Double Tee (Concrete)</i></p>
-----	--	---

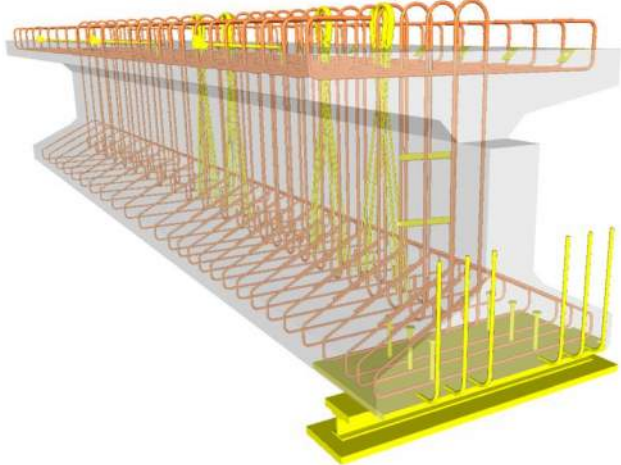

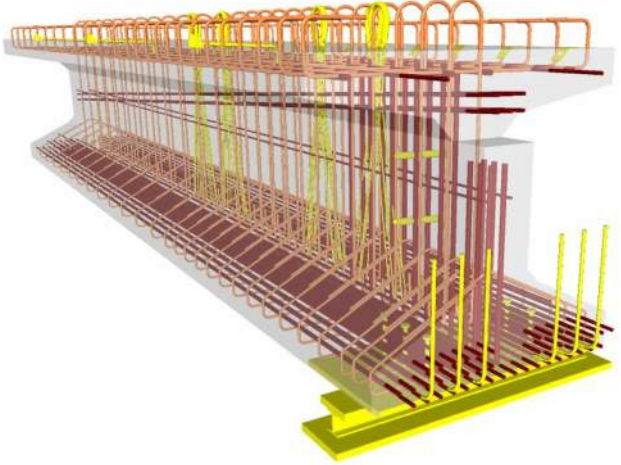

B1010.10 – Precast Wall (Concrete)

100	See B10	
200	<p>Element modeling to include:</p> <ul style="list-style-type: none"> Type of structural concrete system Approximate geometry (e.g. depth) of structural elements

<p>300</p>	<p>Element modeling to include:</p> <ul style="list-style-type: none">• Column base grid line intersections.• Specific sizes of rafter frame structural members, all with correct orientation• Structural steel materials defined. <p>Required non-graphic information associated with model elements may include:</p> <ul style="list-style-type: none">• Connection details• Finishes, i.e. painted, galvanized, et	 <p><i>F1110-LOD 300 Metal Building Framing - Rafter Frames and Columns</i></p>
------------	--	---

350

Element modeling to include:

- Base plate locations with anchor rods and required design forces.
- All member bracing for rafter frame
- Large elements of typical connections applied to all structural steel connections such as base plates, gusset plates, anchor rods, etc.
- Any miscellaneous steel members with correct orientation required for the rafter frame structure or Columns.
- Any steel structure reinforcement such as web stiffeners, sleeve penetrations, etc. required for coordination.

*F1110-LOD 350 Metal Building Framing - Rafter
Frames and Columns*

400

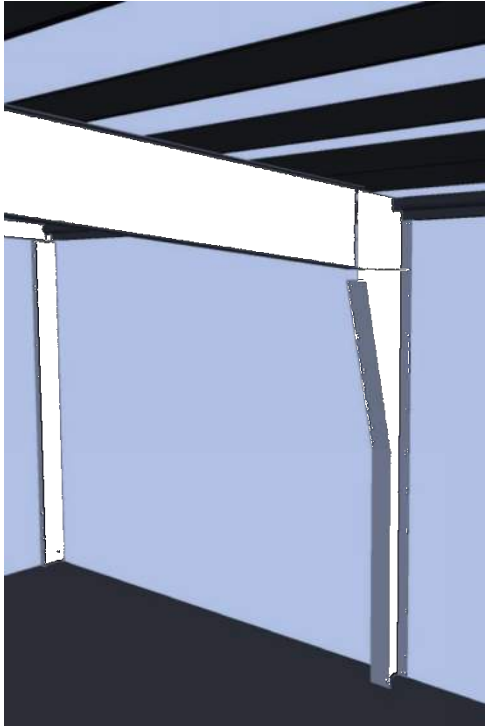

Element modeling to include fabrication level information:

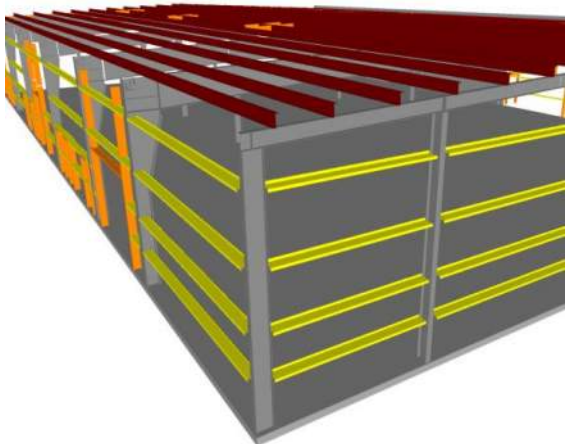

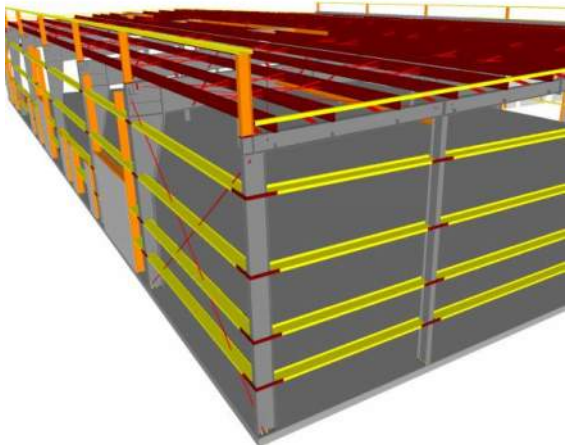

- Welds
- Coping of members
- Washers, nuts, etc.
- All assembly elements
